

draft-ietf-lemonade-
msgevent-04.txt

IETF 69

First Open Issue

- Anchor 11: Should optional vs. mandatory be in this document?
- Current text:

This document does not specify which event parameters are mandatory or optional. That is done when actual message formats or bindings to a notification system are completed.
- Proposal: leave text as-is, delete Anchor-11

Second Open Issue

- Anchor 23: have the mailbox admin events been deployed or should they be added to the exceptions list?
- Current text:

The "core" functionality is based on events which are believed to be well understood, have known use cases and are implemented by at least one deployed real-world Internet message store (FlagsSet and FlagsClear are exceptions to the latter test only).
- Proposal: ask for feedback in room & on list
