

Recent Revision to rfc3344bis

- Document source converted into XML
 - Thanks to Vijay Devarapalli!
- What happens if two mobile nodes at a foreign agent have the same IP address, but register using different NAI extensions?
 - Could happen with dynamic home address assignment
 - Foreign agents already have to store the NAI with the registration records
 - Rewrote a few sentences to enable use of NAI to disambiguate records if two mobile nodes have the same address
