

RTSP 2.0

draft-ietf-mmusic-rfc2326bis-15

Prestented by
Magnus Westerlund

IETF 69

The Latest Revision

- Is a move of the underlying format from LaTeX to XML2RFC
- Has resulted in a lot of layout changes so diff looks big
- Basically no changes to the content spec
- Work done for several reasons
 - Ensure that we can produce drafts without tons of ID-nits
 - Have a format more people knows and can edit in
 - Avoid the RFC-editor to redo the work on the draft.

RTSP Reviewers Team

- A team was formed after Prag to help review the document and provide input
- Have had a phone conference where restructuring and work method was discussed
- If you are interested in contributing please contact us
- Reviewers mailing list:

http://sourceforge.net/mailarchive/forum.php?forum_name=rtspspec-reviewers

Used Tools

- Sourceforge.net project with bugtrackers
<http://sourceforge.net/projects/rtspspec>
- Technical discussion happens on MMUSIC mailing list
- Draft in XML2RFC kept in CVS at sourceforge.net (including notificication list):
http://sourceforge.net/cvs/?group_id=23194

The Way Forward

- The document currently is 215 pages!
- Desire to restructure it to be clearer and shorter:
 - Proposals for how to do that is appreciated
 - Rewrite of introduction part is definitely planned
- Need to resolve the open issues:
 - Bug tracker should list all these
 - Have had some discussion on MMUSIC list

The Way Forward

- So until Vancouver we hope to have done the following:
 - Restructure the draft
 - Provided proposals on how to resolve the open issues
- Resolving the issues will definitely need feedback from both review team and the rest of you
 - Watch the MMUSIC list for proposals
 - Propose solutions yourself
