

Quality Measurement Requirements for Tunneling Protocols

draft-kikuchi-tunnel-measure-req-01.txt
(draft-kikuchi-passive-measure-00.txt)

OPSAWG

69th IETF

Chicago, IL

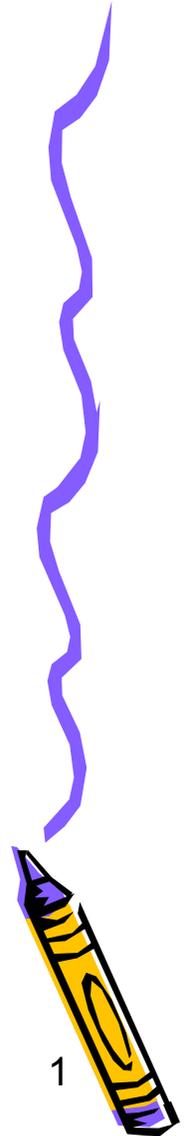

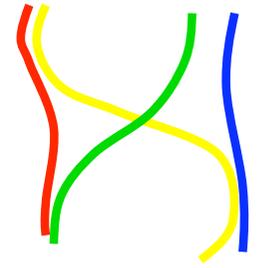

Contents

- Background
- About the original -00 draft
- Update from 68th IETF
- Current I-Ds
 - The requirements
 - Metrics and an algorithm
- An Example
- Discussion

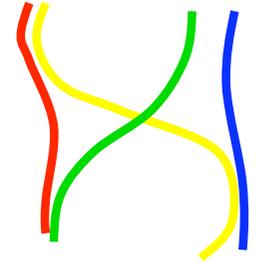

2007.07.24

KIKUCHI Yutaka, Kochi Univ. of Tech.

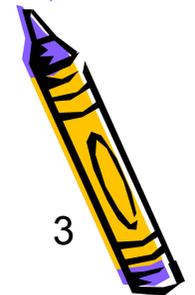

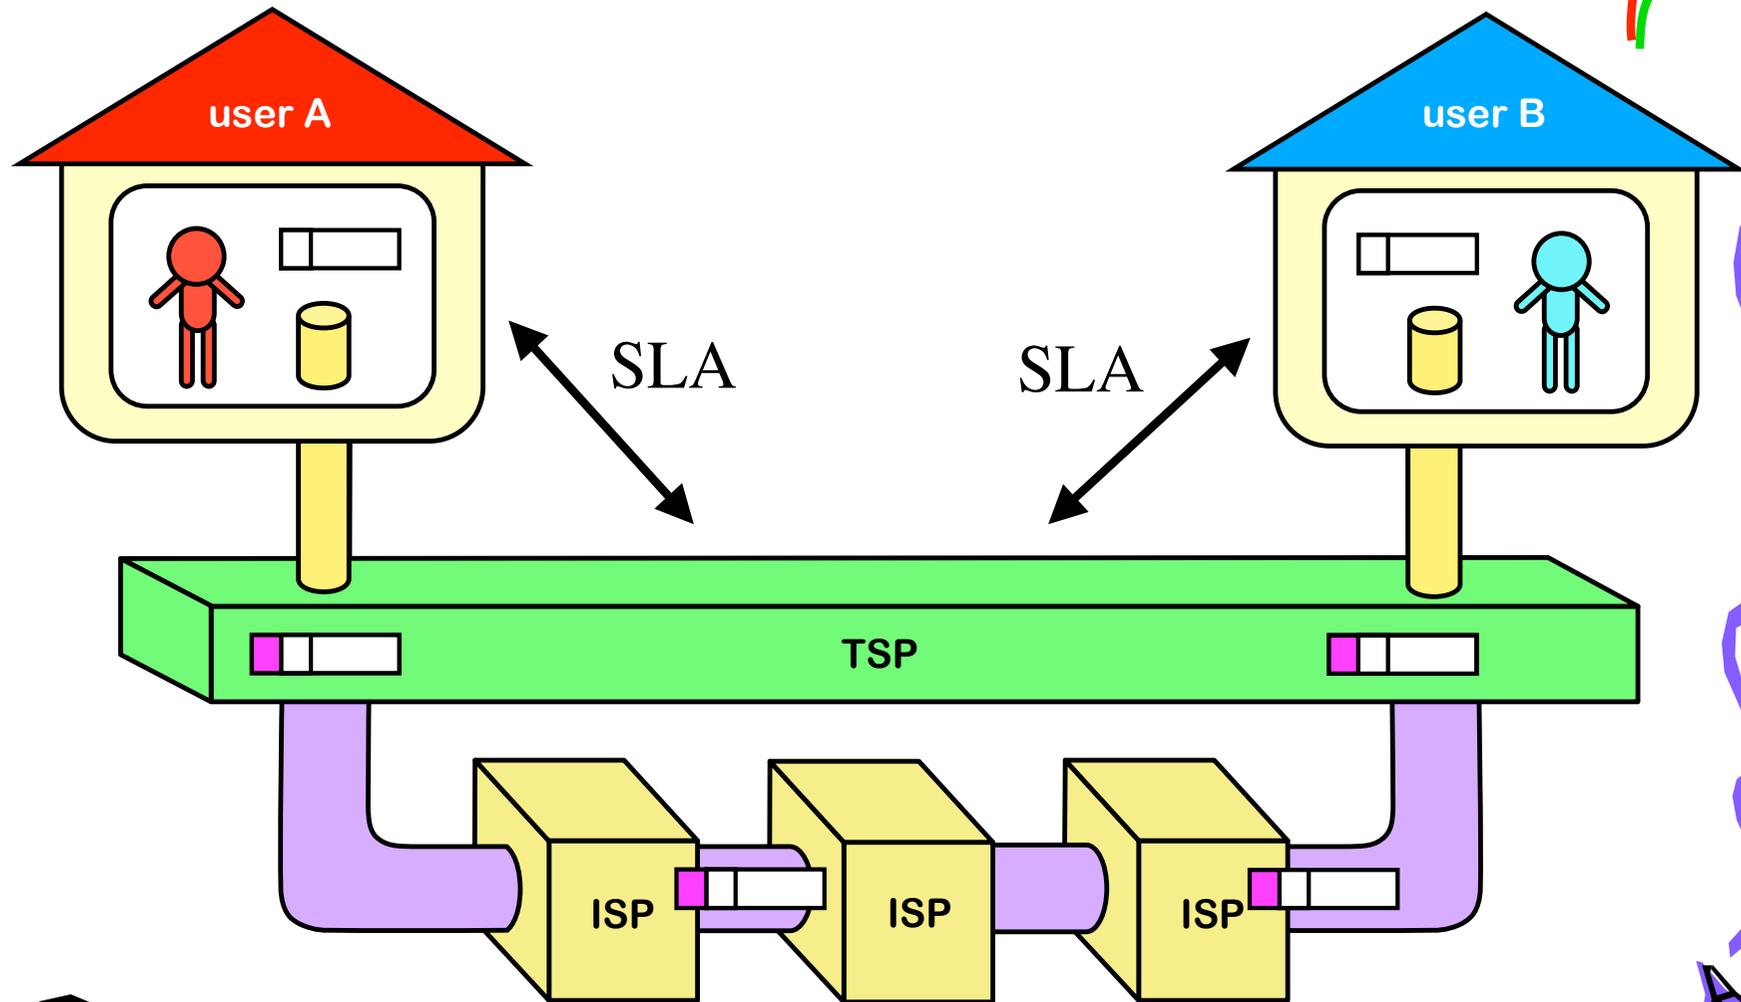

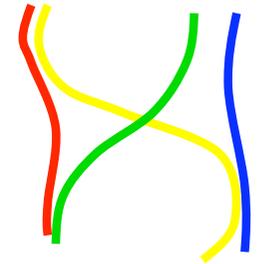

Background

- TSPs:
 - Transport Service Providers who provide transports to users using tunneling technology
- Who needs requirements?
 - TSPs want to know their tunnels' quality
 - No sufficient monitoring way
 - no SNMP, no syslog, no CLI, ...

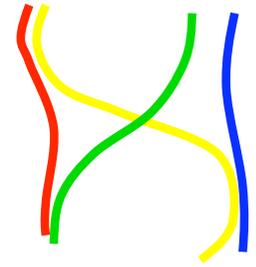

TSP service model

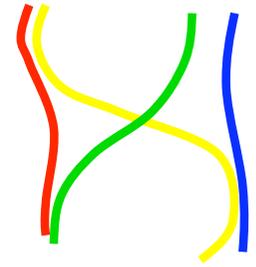

Motivations

- TSP
 - needs to know tunnels' quality,
 - may need to show the quality to their users according to SLA,
 - i.e. service quality of customers' real traffic
 - and may want to chose a better tunnel when they use two or more tunnels

About the -req-00.txt

- Aims to describe both
 - requirements for tunneling protocols, and
 - a passive measurement method
- Presented in 68th IETF in Czech
 - OPS area open meeting

2007.07.24

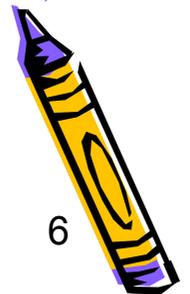

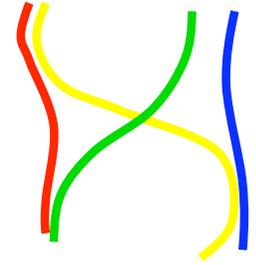

KIKUCHI Yutaka, Kochi Univ. of Tech.

5

Comments in 68th IETF

- Why is the I-D tunnel specific?
- Seq # may cause fragmentation?
- should discuss in IPPM or BMWG?

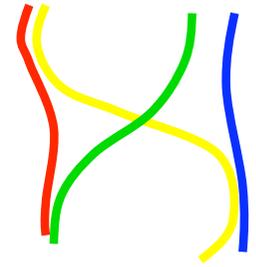

2007.07.24

KIKUCHI Yutaka, Kochi Univ. of Tech.

6

Update

- splitting the original I-D into two I-Ds
 - focus on the Requirements
 - as -reqs-01.txt
 - Metrics and Algorithm
 - as a new I-D
 - should discuss in APM WG?
 - APM WG will come near future?

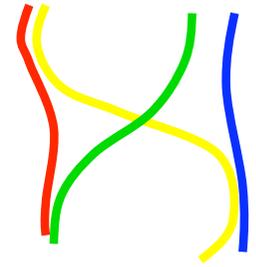

2007.07.24

KIKUCHI Yutaka, Kochi Univ. of Tech.

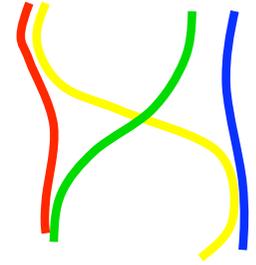

7

Update (cont'd)

- Comment #1
 - Why is the I-D tunnel specific?
- Answer
 - specially needed by TSPs
- Action
 - append a new paragraph explicitly
 - in the section 3 ``motivation''

Update (cont'd)

- Comment #2
 - Seq # may cause fragmentation?
- Answer
 - measurement and overhead are trade-off
- Action
 - a new section “overhead consideration”
 - as the section 4.4

2007.07.24

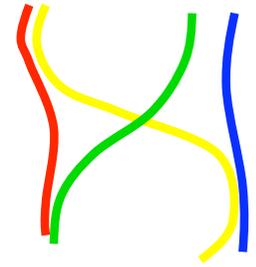

KIKUCHI Yutaka, Kochi Univ. of Tech.

9

Update (cont'd.)

- Comment #3
 - should discuss in IPPM or BMWG?
- Answer
 - Neither IPPM nor BMWG is applicable
 - BMWG is for laboratory environments
 - IPPM does not intend to specific protocols
- Action
 - will attend APM BOF

2007.07.24

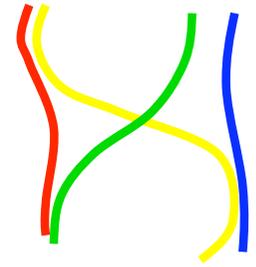

KIKUCHI Yutaka, Kochi Univ. of Tech.

10

Other updates to -01.txt

- distinguish the requirements into
 - general requirements
 - requirements with sequence numbering
- use of the keywords
 - according to RFC2119

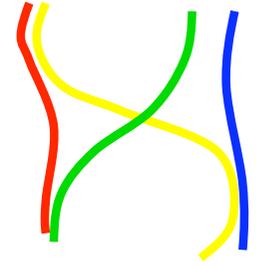

2007.07.24

KIKUCHI Yutaka, Kochi Univ. of Tech.

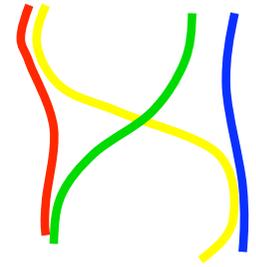

11

General Requirements

- active v.s. passive
 - passive measurement SHOULD be supported
- quality evaluation
 - MUST define ``what'' and ``how''
 - in-sequence/out-of-sequence (REQUIRED)
 - lost, duplication and reordering (SHOULD)
 - delay and jitter (MAY)
- getting quality information
 - MUST define ``how'', e.g. via SNMP

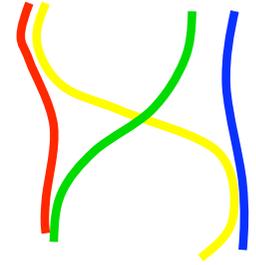

Requirements with seq

- if sequence number is used...
- **MUST** indicate enabled or not
 - by a indication flag or
 - “0” for the meaning “disabled”
 - additional steps are needed
- the length of the field **SHOULD** be long enough
 - trade-off to the overhead

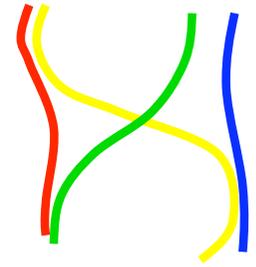

-passive-measure-00.txt

- Title:
 - One-way Passive Measurement of End-to-End Quality
- A solution for the -req-01.txt
 - passive measurement
 - metrics (what) and algorithm (how)
 - less resource consumption and less accurate

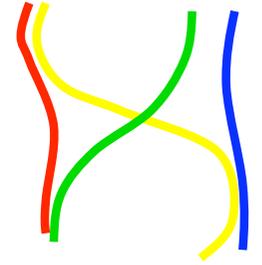

Metrics

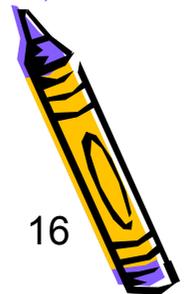

- in-sequence/out-of-sequence for each packet
- # of irregular packets since a tunnel appeared
- irregular types
 - lost: does not arrive in-sequence
 - except duplication
 - duplication: identical packet arrival uninterruptedly
 - reordering: arrival after successive packets

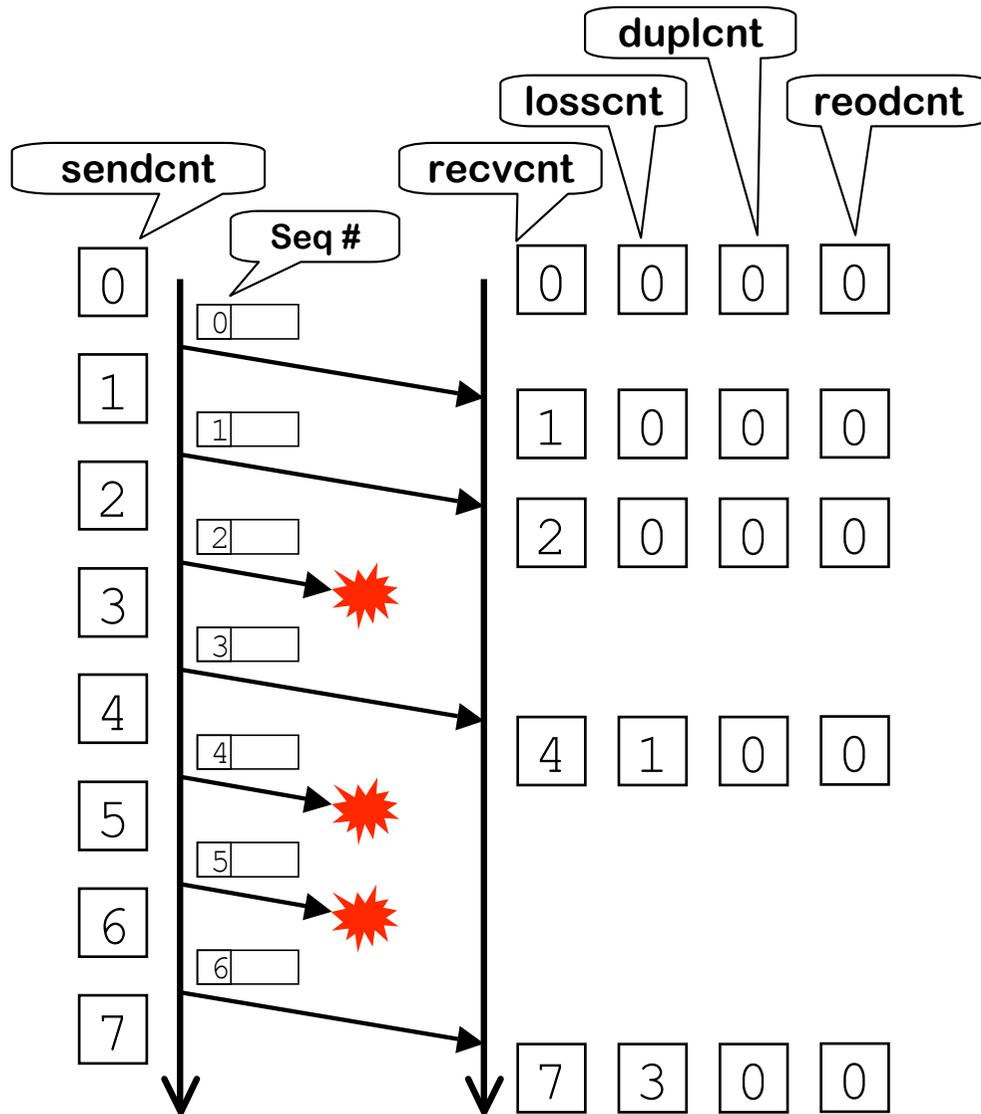

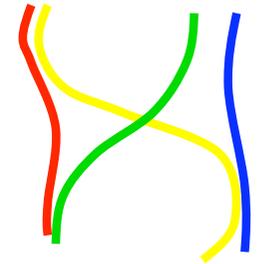

Measure how?

- Passive measurement
 - impose sequence numbers at tunnel ingress
 - expose them and measure at tunnel egress
- Monitor how?
 - not specified here

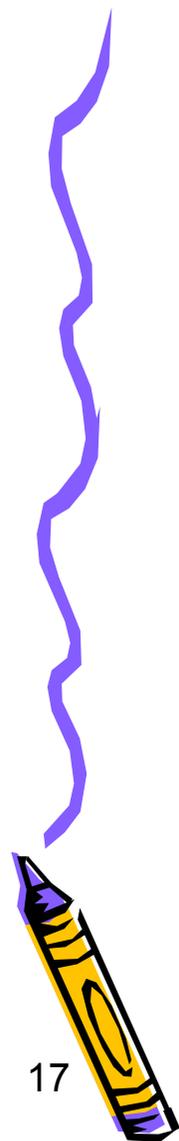

Detecting packet loss

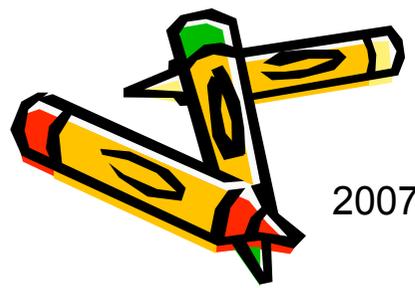

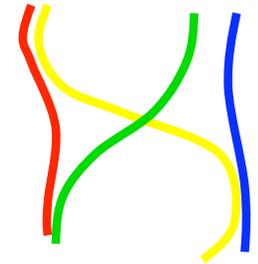

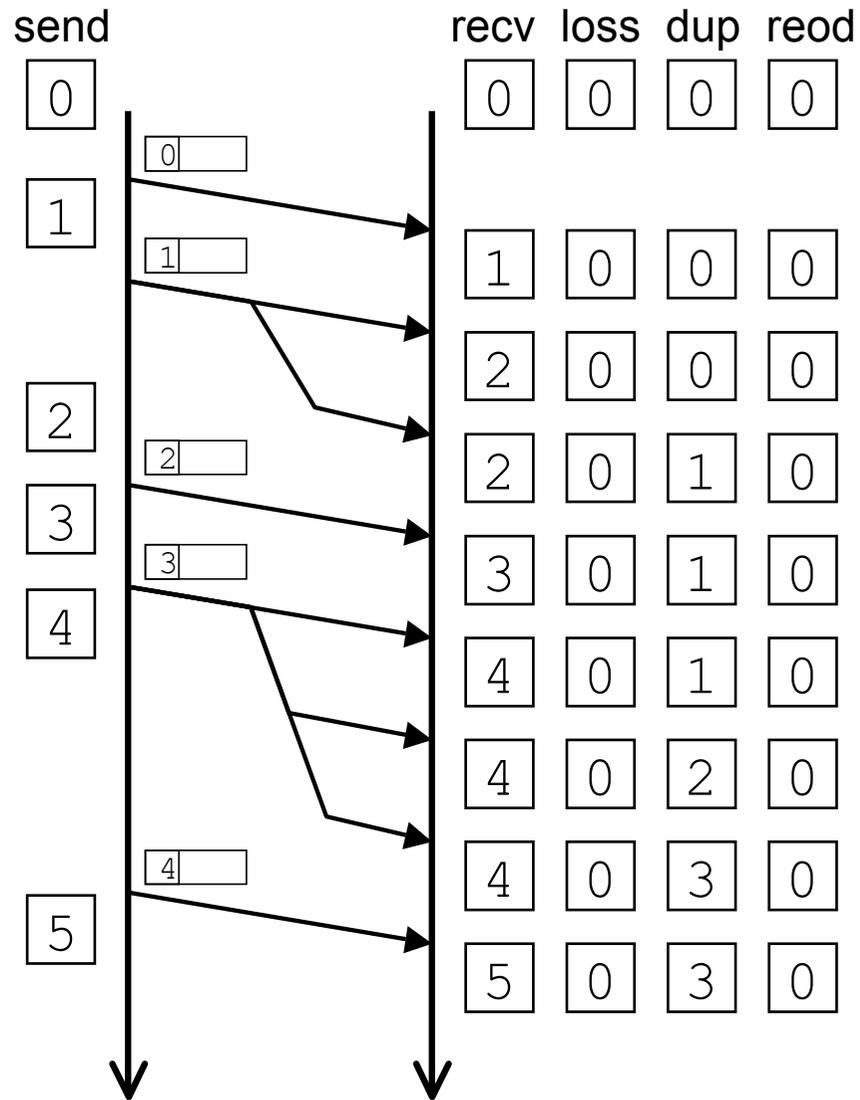

2007.07.24

KIKUCHI Yutaka, Kochi Univ. of Tech.

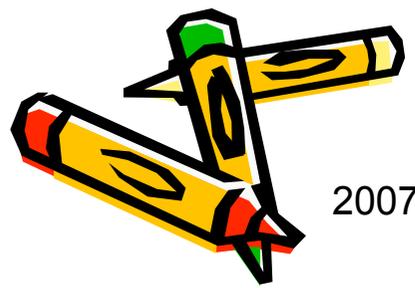

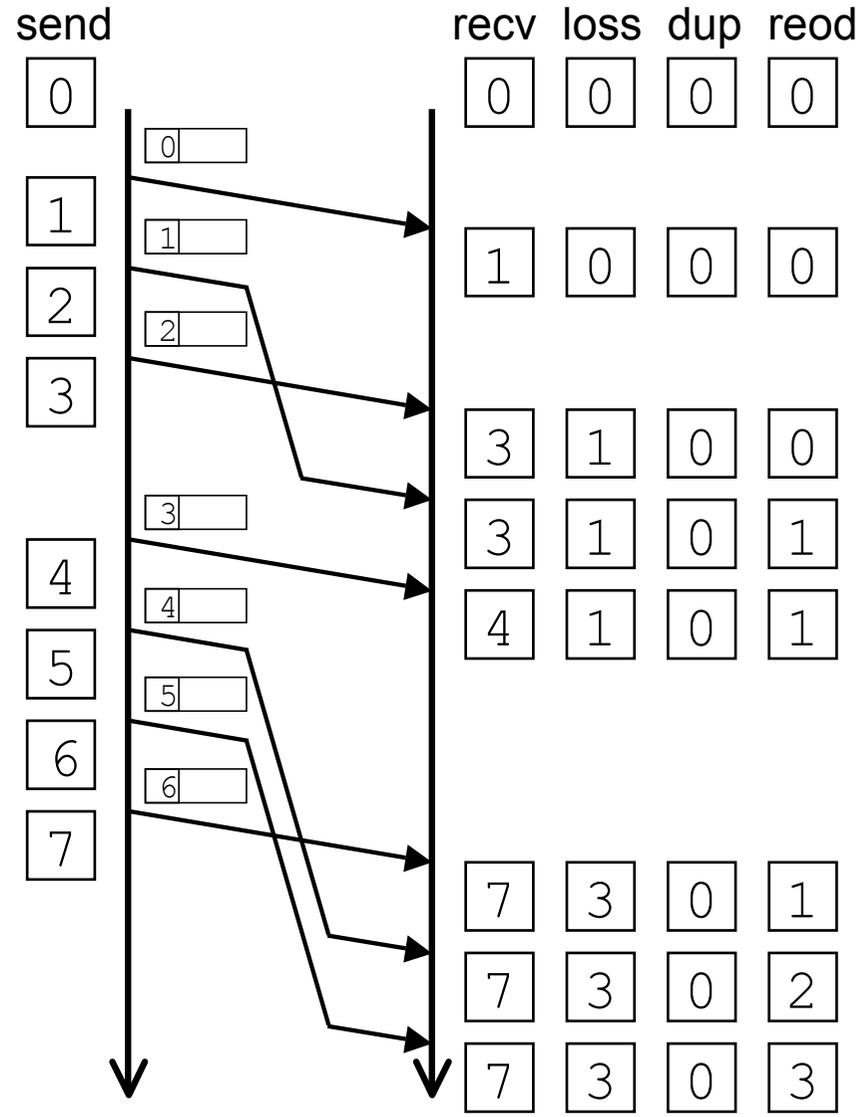

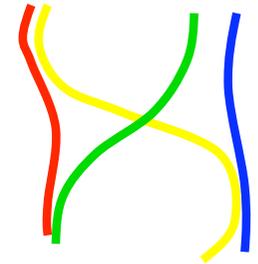

17

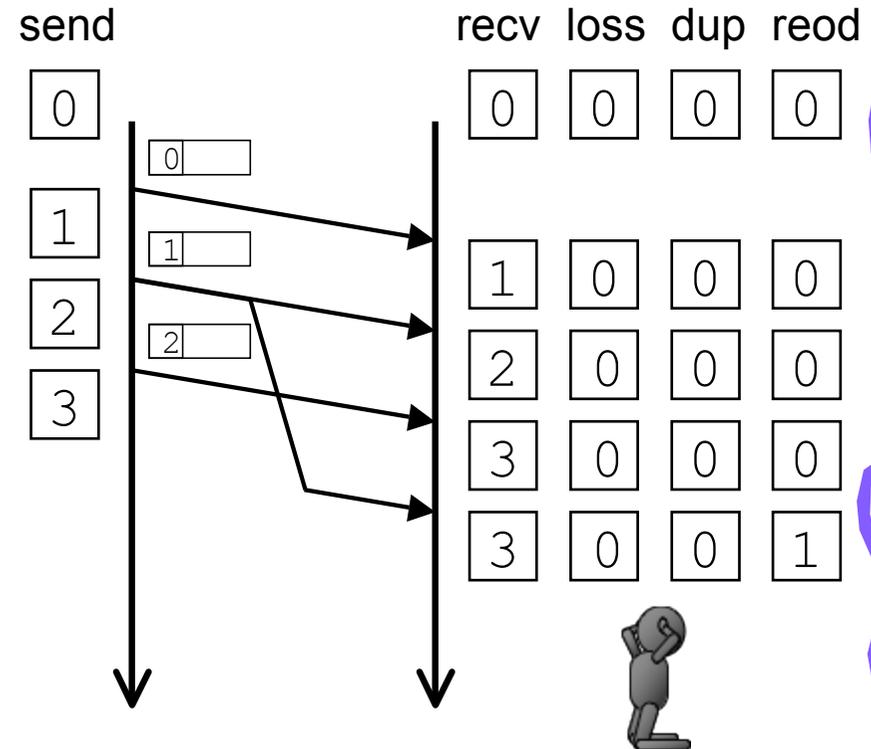

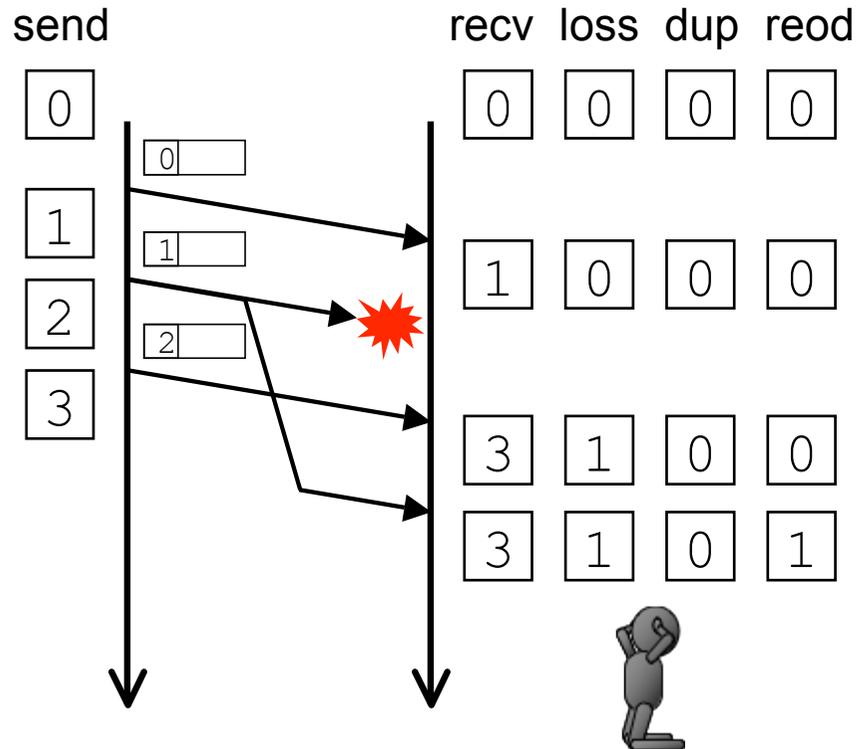

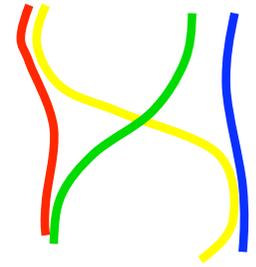

Detecting duplication

Detecting reordering

Complex situations

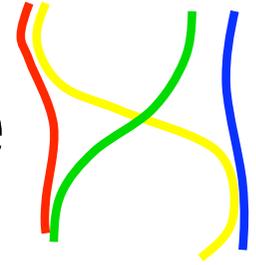

2007.07.24

KIKUCHI Yutaka, Kochi Univ. of Tech.

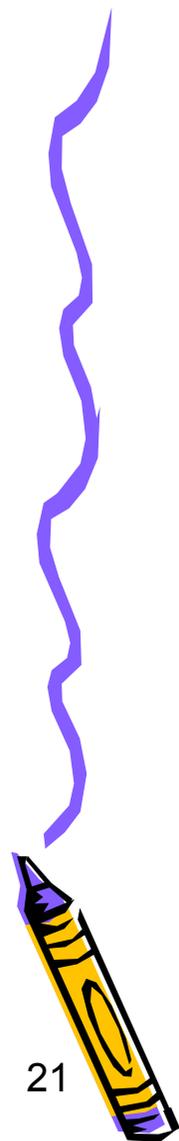

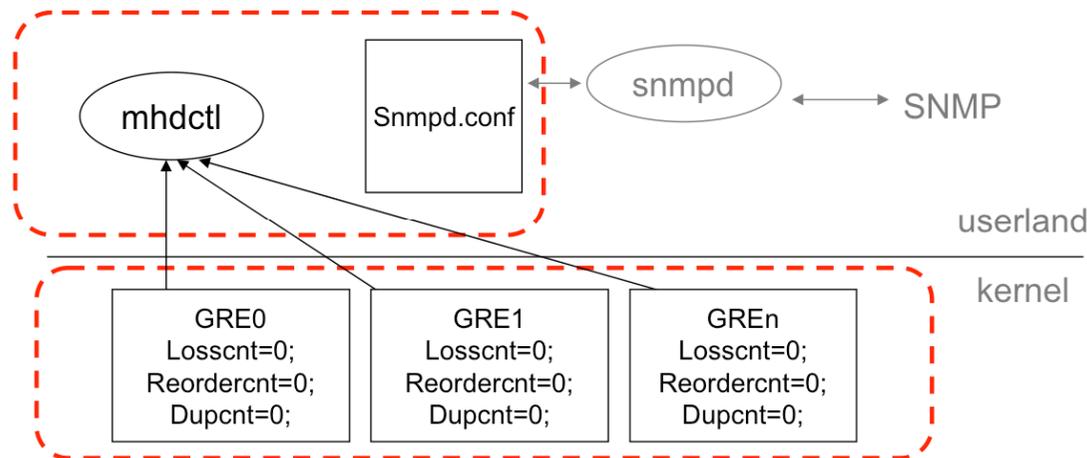

20

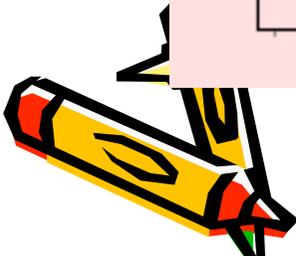

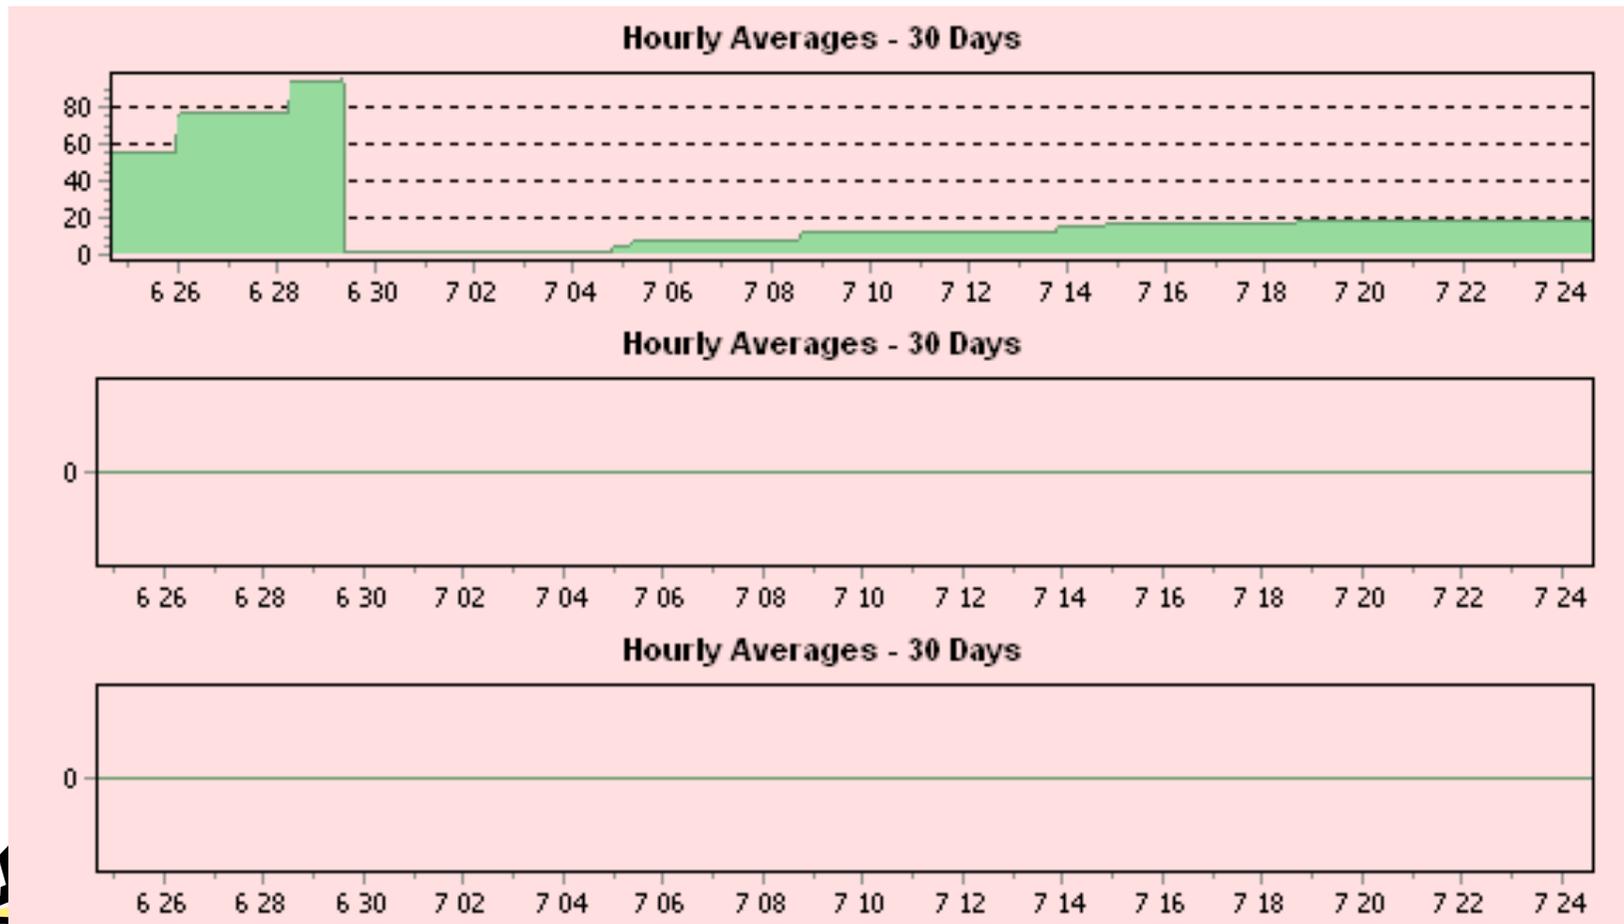

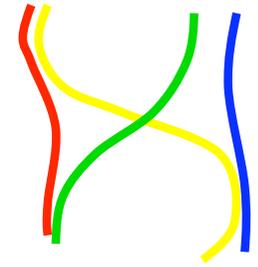

An Implementation Example

- GRE header extension (RFC2890)
 - according to the draft
 - Can get quality information via SNMP
 - using private MIBs of inetcore.com

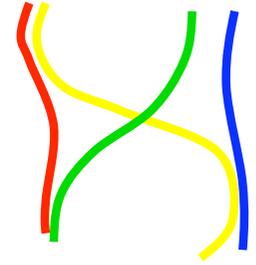

A sample of real quality

Next steps

- getting comments
- attending APM BoF
- to revise the I-Ds
- to find suitable WGs if necessary
- to publish the docs as RFCs
- to write related docs, e.g. MIBs.
