

# Status of DTLS-SRTP

- Removed “Single TLS”
  - Per discussion in ORD
  - Each RTP flow means a new DTLS association
    - \* I.e., TLS connection
  - Use RTP-RTCP mux to minimize cost
- Cleaned up a lot of the AVT terminology and structure
  - Special thanks to Colin for his comments
- I think we’re done
  - All other stuff belongs in other WGs
- Comments?
