RTCP Reporting by Translators

- Origin of work
- Main issues
- Working group item

Origin of work

- Informative text originally in RTCP HR
- Timed out on attempt to combine with "topologies" work
- Draft made up of:
  - material from RTCP HR
  - collected advice from RFC3550
  - requirements
  - early ideas on control by SDP
- New ideas are
  - policy-based forwarding
  - control by profile specification

Main issues

- Is it useful/acceptable to collect quotations from RFC3550?
- Should scope be extended to end systems and mixers?
    - Metrics above transport layer describing application performance of external network tail might be forwarded across end systems and mixers
- Control-by-profile principle must be discussed with experts in sipping and mmusic
    - Thinking has already developed further in latest RTCP HR draft!
- Is Informational right? (do we want to make normative recommendations in this area?)
- Haste meant no acknowledgements section…

Working group item

- Does group agree that (if done well) this will be useful to the community?

- If so may it be adopted as a Working Group item?
