

draft-ietf-agent-vpn-id-05.txt

Changes from previous, -04 version

Kim Kinnear

# draft-ietf-agent-vpn-id-05.txt

- Explained relay-agent behavior if sub-option is not returned in DHCPOFFER from DHCP server.
- Added explicit information about how to do DHCPLeasequery.
- Simplified handling by relay-agent of receipt of this sub-option in packet to be forwarded (leave it up to DHCP server).
- Tightened up the security section, made appropriate for relay-agent sub-option.
- Incorrectly referenced RFC 3040 instead of RFC 4030 when discussing relay-agent authentication.
