

# draft “evil” reflectors

João Damas, Frederico Neves

# Summary of issues raised during last call

- Rephrase description of the attack

Make more readable to readers not familiar with DNS terms. Uses less acronyms.

- BCP 38

Several reviewers have said that the repeated praise of this cure is too intense and indeed it should be more clear that BCP 38 is part of the solution, but would need to be applied by a target audience different from the target audience of the current draft.

- ORNS needed for mobility

Introduced option to use VPN. Find it hard to recommend opening recursive servers to the Internet while there are good solutions that do not require this

# New pre- draft
