draft-denis-behave-dccp-01

BEHAVE working group meeting

Rémi Denis-Courmont

VideoLAN project, VLC

IETF71 - March 13th 2008

Outline

Changes since -00

- removed hints at UDP tunneling
- restructure like BEHAVE-TCP
- fleshed out REQuirements for NATs

Current proporsal

- very (very) much like the BEHAVE TCP document,
- includes the REQs explicitly
- hilighted differences from TCP
- otherwise, refer to BEHAVE-UDP and BEHAVE-TCP

REQ6: ALG

- TCP says "SHOULD NOT"
- DCCP says "MUST NOT"
- Is this OK?

DCCP service codes

- currently not mentioned
- NAT should certainly not modify them!
- should we mention this? as a new requirement?

Packet types

- currently relying on DCCP-Sync
- need to adapt to the updated DCCP-SO draft

What's next?

- Do we want this forward in BEHAVE working?
- Input to the V6CPE document.

The end

Any questions?
