IPFIX mediator for large scale networks

"Not a so technical-based problem"

Emile Stephan (emile.stephan@orange-ftgroup.com)

Migration & coexistence

"IPFIX mediators for large scale networks will have to accept information exported by legacy exporters"

- 2 mandatory aspects of the framework
  - Migration to IPFIX,
  - co existence with IPFIX.

Mediator & interdomain

"Large scale networks includes interdomain networks."

"Interdomain exportation requires mediation (anonimization, filtering, aggregation…) "

conclusion

The main constraints of IPFIX mediators for large scale networks are interoperability with existing exporters and interoperability with collectors of other administrative domains.
