

Framework for Metric Composition + Spatial Composition of Metrics

Al Morton + many others

March, 2008

draft-ietf-ippm-framework-compagg-06.txt

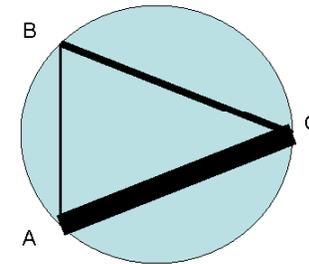

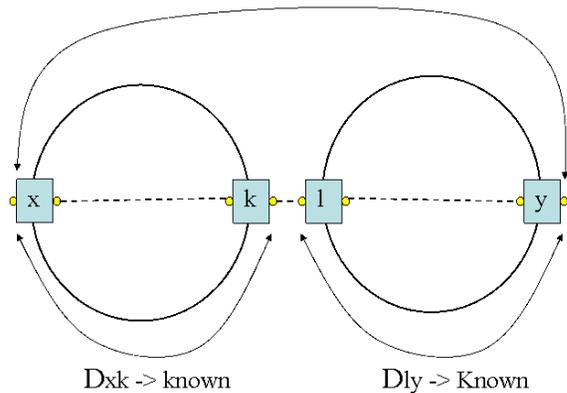

Types of Composition

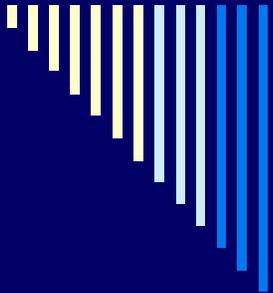

- Complete/Sub-Path (or Concatenation in Space)

- Aggregation in Time (12x5min stats ->1 hr)
- Aggregat. in Space

D_{xy} (not known) $\approx D_{xk} + D_{ly}$???

	Delay	Load
A-B	24.5 ms	1 Gbit/s
B-C	7.8 ms	3 Gbit/s
A-C	4 ms	9 Gbit/s
Domain	$1/13 * 24.5 + 3/13 * 7.8 + 9/13 * 4 = 6.4$ ms	13 Gbit/s

Comments on 05 (pre-IETF70)

Reza Fardid

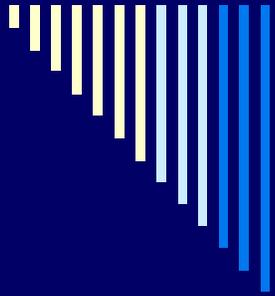

- Section 3.6 R-factor is a valid example of an index as defined here, however, it is composed of both IP performance metrics and analog metrics. In scope ?
 - Loki's point: Scope is Loss, Delay, and Delay Variation
 - Revised the Definition – Index is the result of a deterministic function and separate from the composition and aggregation
 - Refined example – now just the packet loss I_{e-eff}
 - This might fit better in the PMOL framework...
- Another example index composed of IP performance metrics is MDI, per rfc4445
 - Avoid referencing RFC Editor submissions

Comments on 05

Reza Fardid

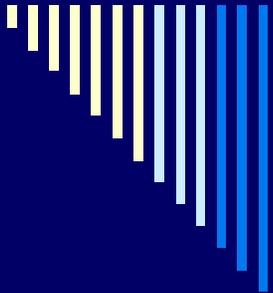

- Section 4.1 Is the comment referring to forecasting of one metric from another, whose temporally aggregated measurements are available?
 - Clarified that this describes prediction among identical metrics

Comments on 05

Reza Fardid

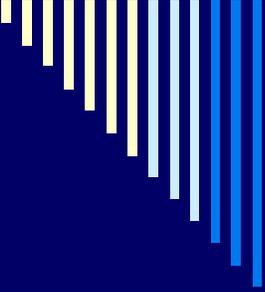

- Section 4.5 Higher-order Composition:
Another example will be helpful here.
 - Clarified the existing spatial comp example and added a temporal aggregation example.

Recent Comments on 05

Loki Jorgenson

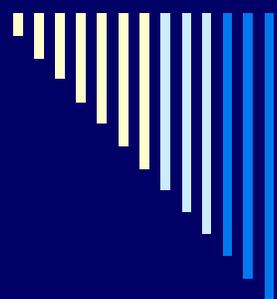

- Section 3.2 - reference to "true path" with no entry under Terminology to define it. Suggest changing it to something more like "actual" (as used in "ground truth").
 - Agreed
- Section 5. - As I was dealing with IPR issues today and aspects of viral licensing, is it appropriate to include in any composition metric description IP references to embedded proprietary metrics and/or use of standards?
 - Standards may or may not have IPR
 - Added point at end of section: If IPR in the process, then Composed Metric may be encumbered, see BCP 79
- Section 4.1 – caution needed with regard to time-varying vs. time-invariant metrics
 - New section 6.4 deals with time varying metrics (concerns are not unique to composition)

Status of Framework 06

□ Next Steps

- Address the recent comments?
- Consider this text sufficiently stable?
- If so, Convince more folks to Read and Comment on...

Status: Spatial Composition 06

- Revisions to Outline to keep in step with Framework Modifications up to 05
 - “true foo” became “ground truth foo”
- NEXT STEPS:
 - Need Volunteers to read and comment
