

# Security Moves On

**Sam Hartman**

Massachusetts Institute of Technology

IETF 71

March 13, 2008

## Welcome Pasi

- Over the past three years I've had the privilege of working with Russ, Tim and all of you.
- Now, I have the privilege to watch as Pasi works with us all to move forward.
- I look forward to being a contributor and reviewer

# Successes

Over the past three years, we've made important strides. I've helped, but you have driven these efforts throughout the IETF.

- Making security easier to use and more flexible:
  - BTNS
  - Channel binding
- Working with other areas:
  - CAPWAP
  - Softwires and the Internet area
- Voip security and using proxies to secure end-to-end channels.

# Thanks

You all helped make these successes possible. I'd like to thank a lot of people.

- Security directorate
- Chairs and document authors
- Reviewers

## Challenges for the Future

- Struggling to understand routing and PWE3 security
- Proxies
- Continuing to make our solutions more usable

## My Future Plans

I look forward to continuing to work with you all as a contributor and reviewer, but I have plans of my own that are taking up time:
