Critical Path Issues
Protocol and Rationale

- Blocking progress on documents
- Other issues need to be sorted out, but don't affect basic structure or decisions

John Klensin

IDNABIS, IETF 72

Rationale – Critical Path 1

- (R.1) Keep or drop document
  - If drop, process for identifying material to retain elsewhere
  - If keep, how hard to try to separate normative text (R.2)
- (R.8) Context registry update procedures
  - Interacts with Protocol doc (now) and Tables update procedures

Rationale – Critical Path 2

- (R.27, P.6) Policy statements about zone adminstrators

- (R.24, P.12) Local Mapping/ Preprocessing
  - What to say, where, and how strongly

Protocol – Critical Path 1

- (P.2, P.3) Format of contextual rules table
  - Appendix A (single regex, compact) or
  - Appendix B (sequential rules, more page space)
  - Table will end up in Tables regardless unless there are objections RSN
- (P.8) Validation of A-labels
- (P.16) Version numbers for Contextual Rule registry

Protocol – Critical Path 2

- (P.4) Whole domain checking for bidi
  - Or just single-labels
  - Really a bidi issue
