Discussion

- No issues raised on mailing list
- From last meeting, clarify L2 trigger

6. MN_ATTACH Function

The MN_ATTACH function is invoked by the MN whenever it attaches to a new MAG. This can be detected with the assistance of layer 2 triggers (e.g., a link up event from a device driver), or through the periodic transmission of Router Solicitation messages. MN_ATTACH consists of the following sub-functions:

- Update reference to dna?
