

draft-bierman-netmod-yang-usage-00.txt

#### Issues:

- YANG language specification does not provide enough standards value because too many clauses are optional or unbounded, e.g.:
  - description clauses
  - revision statements
  - identifiers larger than 63 characters
- YANG modules submitted to the IESG for review need to be documented more rigorously than unpublished modules:
  - Authors need to know the exact criteria the reviewers will be using
- Readers need a high level of documentation quality and consistency to learn YANG more easily

#### Options for YANG Usage Guidelines:

- Do nothing; face significant objections during Last Call
- Publish as Best Current Practice RFC
  - Start now so guidelines are available soon after YANG is completed
