

# **Security Assessment of the Internet Protocol version 4 (draft-ietf-opsec-ip-security)**

Presented by  
**Joel Jaeggli**

IETF 74, San Francisco, USA

# Update

- This document was originally an IETF I-D version of the document “Security Assessment of the Internet Protocol” released in July 2008 by the UK CPNI.
- Adopted in 2008 as an opsec wg item
- Some feedback (sent on- and off-list) still needs to be addressed
- There’s still some editorial work to be done (i.e., producing ASCII-art versions of the figures in the UK CPNI document)
- Document author working on a revision.

# Request for input

- Current target of the document is *Informational*
- Maybe *BCP* would be a better target for this I-D?
