

draft-dhankins-softwire-tunnel-option-03

David W. Hankins
Internet Systems Consortium,
Inc.
March 2009

Draft Status

- Name changed to `OPTION_DS_LITE`, draft language (hopefully) updated to refer to “Dual Stack Lite” and not “Softwires” generally.
- References `draft-ietf-softwire-dual-stack-lite-00`
- WG item?

Author's Presumptiveness

- Only required 'config knob' is endpoint? No tunnel type? No other flags or setpoints?
- Only one endpoint is sensible?
- “Operational Utilities” to manage tunnel endpoint likely to be solved in “routing spaces” (anycast, role addresses, etc) rather than dns?

Feedback

- Name change, thanks Francois.
- Make-before-break being desirable?
 - Author understands feedback, but this seriously complicates protocol (and may indicate no DHC use). Is there support?
- Advertise your feedback here, \$0.25/ea.
