# Scope

- extends the SDP capability negotiation framework to allow endpoints to negotiate a number of miscellaneous SDP capabilities

- mechanism are provided to negotiate media titles ("i=" line for each media), connection data ("c=" line), and media bandwidth ("b=" line)

- does NOT define a capability attribute for encryption keys ("k=")

# Changes since -00 version

- No technical changes
- Need to coordinate with draft-boucadair-mmusic-ccap-00 that also defines a "ccap" attribute

# Thank you
