draft-ietf-tsvwg-rsvp-emergency-12.txt

Resource ReSerVation Protocol (RSVP) Extensions for Admission Priority

Francois Le Faucheur - flefauch@cisco.com

Francois Le Faucheur,
James Polk,
Cisco Systems

Ken Carlberg
G11

Changes since -11 (1/2)

- reflect the directives that came out of IESG review:

(i) remove all text about emergency/GETS/etc. i.e. the I-D is purely specifying an RSVP mechanism (without discussing "architectures/services" that may make use of it).

(ii) remove references to "calls" and instead talk about "sessions"

(iii) include a statement restricting operations to intra-domain ("*Based on current security concerns, these extensions are targeting applicability within a single domain.*")

Changes since -11 (2/2)

- Clean-ups:

(i) Removed the ref to DIME I-D since they removed admission priority from their doc

(ii) updated the Security:

- referred to draft-rahman-rtg-router-alert-considerations for discussion of RAO issues (instead of the text that was there)

- Included SHOULDs/MAYs inside Security section, in accordance with latest practices

Next Steps

- **IESG to confirm that document can resume its progress**
