

# iCalendar-in-XML

Cyrus Daboo, Apple Inc.

# iCalendar-in-XML

- draft-daboo-et-al-icalendar-in-xml-00.txt
- One-to-one mapping between iCalendar and XML
- Similar to vCard-in-XML spec
- Would like both specs to be similar to allow one to embed the other

# iCalendar-in-XML

- Differences from vCard spec:
  - Allows multiple VCALENDAR object within top-level <icalendar> element
  - Uses container elements for <components>, <properties> and <parameters>
  - Uses text values for enumerations e.g. “CLASS” property values
