

# **IPFIX MIB**

**IPFIX IETF-76 Nov 11th, 2009**

**<draft-ietf-ipfix-mib-08.txt>**

**Thomas Dietz, Atsushi Kobayashi, Gerhard Muenz, Benoit Claise**

# New in this Version

---

- **Removed global ipfixExportVersion**
- **Added version information per Transport Session**
- **Removed ipfixTemplateObservationDomainId and ipfixTemplateId as index in the ipfixExportTable**
- **Minor editorial fixes**

# One Open Issue Left

---

- **You receive an IPFIX message with an Observation Domain ID value in the message header**
- **Now, you want to query the IPFIX-MIB which are the Observation Points**
- **There is currently no way to poll the OP from the OD ID**
- **Except the OD ID is the line card ID (from the ENTITY-MIB) but this is not mandatory**
- **Solution proposed: adding a new read-only OID `ipfixObservationPointObservationDomainId` in the `ipfixObservationPointTable`**
