MIKEY Future Directions discussion

- MSEC has published a number of MIKEY drafts
  - But MIKEY isn't the SRTP key management protocol of choice at the IETF
  - There are a lot of modes with no guidance on when to use each mode, which has made interoperability unlikely.
- Where is MIKEY actively specified and used?
  - 3GPP uses one or more modes of MIKEY. Any other groups?
  - Does it make sense for MSEC to continue publishing MIKEY drafts for exclusively non-IETF use cases?
  - Is there an alternative venue that makes more sense?
- Should MSEC continue to publish MIKEY drafts?
  - If so, we need input on which ones and we need commitments for reviewers
