Recommendations for filtering ICMP messages
(draft-ietf-opsec-icmp-filtering)

Fernando Gont
UTN/FRH

76th IETF meeting, November 8-13, 2009
Hiroshima, Japan
Changes from the last rev

- Populated a few sections
- Updated outdated references
- Miscellaneous edits
- Progress was slow… but now committing more cycles to it
Open Issues

- The document is currently heading for Informational.
  - Some suggested BCP
  - BCP might be a better target (personally, I’m happy either way)
  - Got some positive comments for aiming at BCP

- Current advice assumes what to do with ICMP messages that go “through” the device
  - Should advice also address filtering messages from/to the device?
  - Got some positive comments about this idea
Moving forward

- Currently working on the ICMPv6 sections
- Rest of the document still needs work/review
- If you have feedback, post it on opsec@ietf.org, or send it to fernando@gont.com.ar
