

RSVP Proxy

draft-ietf-tsvwg-rsvp-proxy-approaches-08.txt

draft-ietf-tsvwg-rsvp-proxy-proto-10.txt

Francois Le Faucheur - flefauch@cisco.com

Most Significant Change

- **Address IESG Concern:**

Once Proxies are deployed, how can endpoints evolve towards end-to-end RSVP support?

- **Solution announced and discussed on the list**

See thread starting with

<http://www.ietf.org/mail-archive/web/tsvwg/current/msg09477.html>

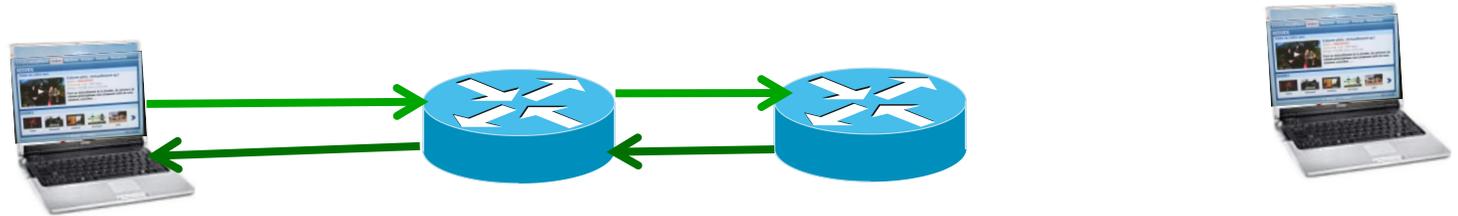

- **For Path-Triggered RSVP Receiver Proxy, two mechanisms for dynamic migration from a Proxy mode to an e2e RSVP mode:**

- **Dynamic Discovery of Downstream RSVP Functionality**
- **Sender Control of Receiver Proxy**

Dynamic Discovery of Downstream RSVP Functionality (this is a “SHOULD”)

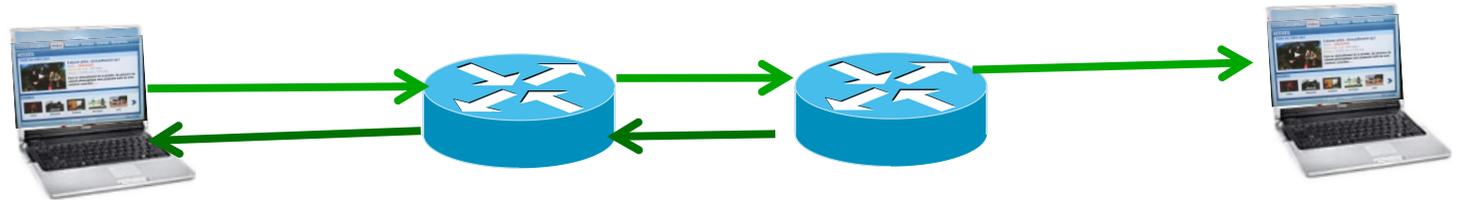

•Without Dynamic Discovery

•RSVP-capable or non-RSVP-capable endpoint

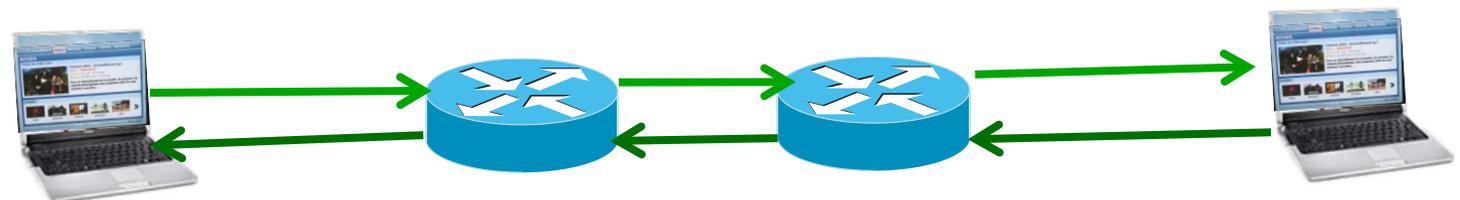

•With Dynamic Discovery

• Non-RSVP-capable endpoint

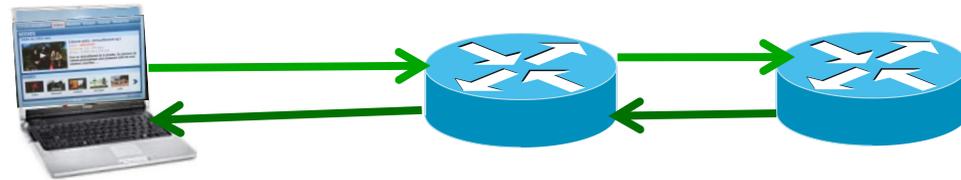

•With Dynamic Discovery

•RSVP-capable endpoint

Sender Control of Receiver Proxy (This is a “MAY”)

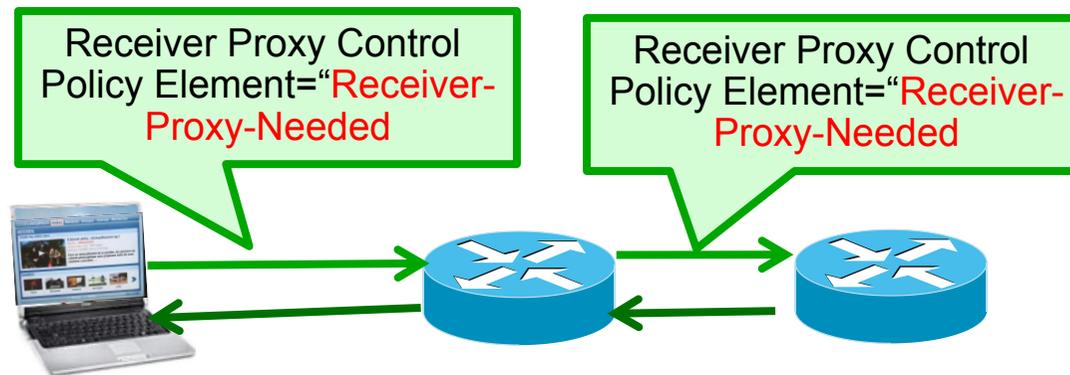

•Without Sender Control

•RSVP-capable or non-RSVP-capable endpoint

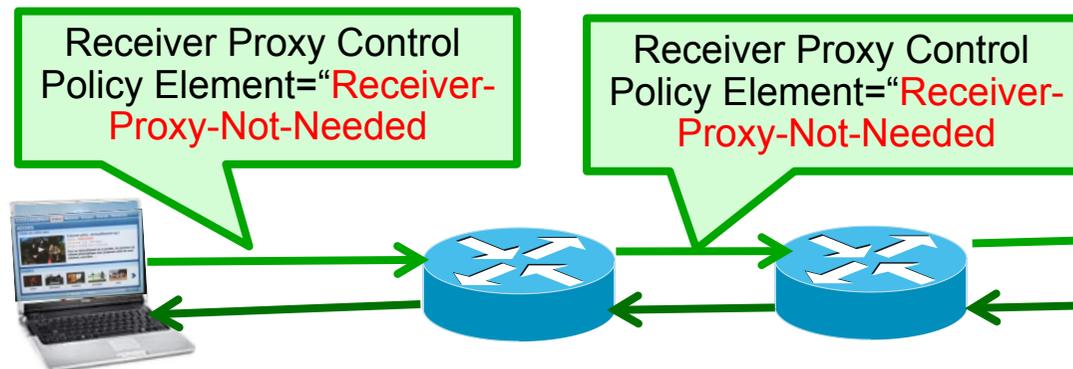

•With Sender Control

• Non-RSVP-capable endpoint

•With Sender Control

•RSVP-capable endpoint
