Generic Notifications

draft-ietf-mip4-generic-notification-message-14.txt

Resubmission Strategy

IESG Issues

- What are the motivating use cases? Why does the mechanism need to be generic?
  - New text in draft: is it sufficient?
- Can this mechanism be abused to cause interoperability problems?
  - Still need to add "Specification Required" language to Section 5
  - Still need to get rid of GNM Subtype reference in Sections 5 and 6
  - Can we have "Specification Required" for behavior-only, no actual field value allocated?
