

ORACLE®

3530bis update

Tom Haynes
Principal Software Engineer

Where we are

- Converted RFC 3530 to xml format
- The RPC definition has been moved to a companion document
- Updates for the latest IETF intellectual property statements
- LIPKEY SPKM/3 has been moved from being mandatory to optional
- Some clarification on a client re-establishing callback information to the new server if state has been migrated

LIPKEY SPKM/3

- Do we just want to remove it?

Where are we going

- Pull text from RFC 5661:
 - Referrals and migration
 - ACLs
 - What else do we want to grab?
- List of issues
 - In email
 - Can track with an issue tracker or bugzilla
 - Allows multiple people to file/own issues
 - How do we keep persistent record afterwards?
- Source code
 - Git/svcs/mercurial
 - Allow multiple submitters
- Where do we host it all?
