SCTP/UDP

draft-tuexen-sctp-udp-encaps-03.txt

Randall Stewart (rstewart@huawei.com)

Michael Tüxen (tuexen@fh-muenster.de)

Current Status

- The document is incomplete and describes the BSD implementation of UDP encapsulation.
- The actual encapsulation/decapsulation has to be done per-path and is pretty generic.
- The current ID misses the ICMP handling, which requires protocol specific procedures.
- For NAT traversal, protocol specific procedures for handling multihoming are required.
- Interest in this ID in the WG?
