

Status Report

ANCP Multicast Extensions

draft-ietf-ancp-mc-extensions-02.txt

Roberta Maglione
François Le Faucheur
Tom Taylor

IETF 78

To-Do List

- Two minor fixes
 - Withdraw text on segmentation of Multicast Flow Query responses
 - Add text to say that there is no capability data associated with any of the multicast capabilities
- Still defining additional capability requested by Kristian Poscic at IETF 77
 - Basic proposal on next page
 - Will present to the list for confirmation
- Probably ready for WGLC after next version

Multicast Usage Reporting Capability

- Basic proposal: one new message sent autonomously by AN to report total bandwidth used by a line each time that bandwidth changes
- Optimization: hold message for certain amount of time. If changes happen for other access lines, include those in the report too. If further changes happen for an access line, provide latest view only.

Doesn't appear to be any interaction with other capabilities.
