

Globally Identifiable Number (GIN) Registration

Adam Roach

`draft-ietf-martini-gin-05`

MARTINI / IETF 78, Session 2

July 29th, 2010

Proposed Language

- In order to provide support for privacy, the SSP SHOULD implement the temporary GRUU mechanism described in this section. Reasons for not doing so would include systems with an alternative privacy mechanism which maintains the integrity of public GRUUs (i.e., if public GRUUs are anonymized then the anonymizer function would need to be capable of providing as the anonymized URI a globally routable URI that routes back only to the target identified by the original public GRUU).
