

# **Use Cases and Interpretation of RPKI Objects for Issuers and Relying Parties**

**draft-ietf-sidr-usecases-00**

**Terry Manderson, K. Sriram, and Russ White**

**IETF SIDR WG Meeting**

**July 2010**

# What is New/Revised (1/2)

- Revised / updated based on comments from WG members on the list and from the Anaheim meeting
  - Detailed comments from Steve Kent (mostly incorporated)
  - Section 3.1 Origination Use Cases – feedback was that they lacked rigor in the way they were organized
    - Use cases are based on both what is seen in BGP, and what we have been told people do in originating (or not originating) prefixes
    - Still struggling to bring out the best possible order in them
    - Authors could use some help with this from the WG

# What is New/Revised (2/2)

- Taxonomy change in Sections 3 through 6:
  - Valid / Invalid → Desired / Undesirable Announcements
- Section 7.2 (Prefix, Origin Validation Uses Cases) is new
  - A listing of use case scenarios from the RP point of view
  - No mention or discussion of validation outcomes
- Request everyone to read the draft and offer your comments / suggestions

Thank you
