Agenda

- Changes to NACM Draft

- Open Issues

Changes to NACM draft

- Clarifications and editorial changes only
  - Update references for YANG, YANG Types
  - Filled in IANA Considerations section
  - Fixed namespace bugs in examples

Open Issues

- Should authentication objects be moved to a new document
  - If so, should local groups remain in NACM?
- What to do about <copy-config> leaving out unauthorized data?
  - Should backup/restore only be done by a user with full access, or should the server violate the NETCONF operation and pretend the unauthorized data was not removed?
- Is an <access-denied> notification event needed?
