Guidelines for the use of the OAM
acronym in the IETF
(nee The OAM Acronym Soup)

Editors and Content Providers

 - Huub van Helvoort
 - Ron Bonica
 - Dan Romascanu
 - Scott Mansfield
-

A bit of history

- Original scope of the document:
 - Informational document
 - Provide a definition for OAM and O&M that can be used for the MPLS-TP documents
 - This was considered to be too narrow for the scope
 - In order to provide real guidance on the use of terms in IETF documents, the draft needs to be on the BCP track
-

Purpose of the Draft

- Provide a definition for OAM and O&M that can be used for IETF documents
 - Background information on various uses of the terms OAM and OAM&P
 - Provides an expansion of the acronyms and examples of what each letter in the acronym means
 - Current definitions:
 - OAM - Operations, Administration and Maintenance
 - O&M - OAM and Management
 - "Mgmt" - Management
-

Major changes from previous versions

- Modified scope to indicate this document is relevant for all future IETF documents
 - Changed the Intended status to BCP
 - Fixed the FCAPS expansion
 - P in FCAPS is Performance
 - P in OAM&P is Provisioning
 - Editorial changes (spelling, grammar, etc...)
 - Fixed/added necessary references
 - Removed the IETF/ITU-T MPLS-TP language from the abstract and the introduction
-

Document Timeline

- Initial working group draft
 - Accepted 2009-09-10
 - Current version
 - draft-ietf-opsawg-mpls-tp-oam-07
 - 2010-09-27
 - Plan to go for another working group last call after this meeting
-

Thanks!
