

A brief history of Time(Zones) and the TZ Database

Eliot Lear

Standard Time

- Clock towers provided local time since antiquity
- British Railways began carrying chronometers around 1847
- This de facto standard became known as Railway Time

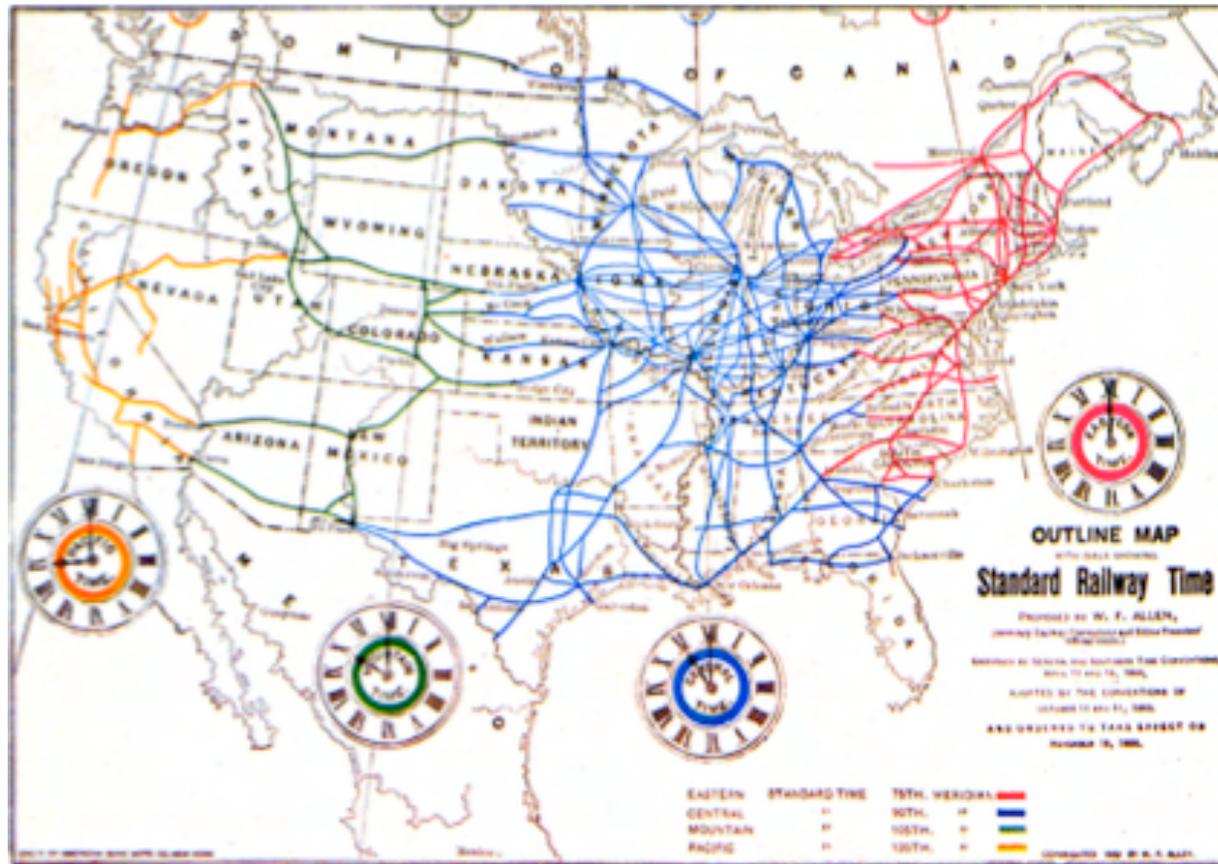

Joseph V. Noble; Derek J. de Solla Price: *The Water Clock in the Tower of the Winds*, *American Journal of Archaeology*, Vol. 72, No. 4 (1968), pp. 345-355 (353)

Why should anyone care?

- Many events are synchronized across a network
 - Meetings, room availability, people availability
 - Recording devices need local time
- Access controls use local time
 - “Don’t allow little Johnny to watch TV past 10pm”
- Some laws talk about time of day
 - Noise regulations
 - Content restrictions

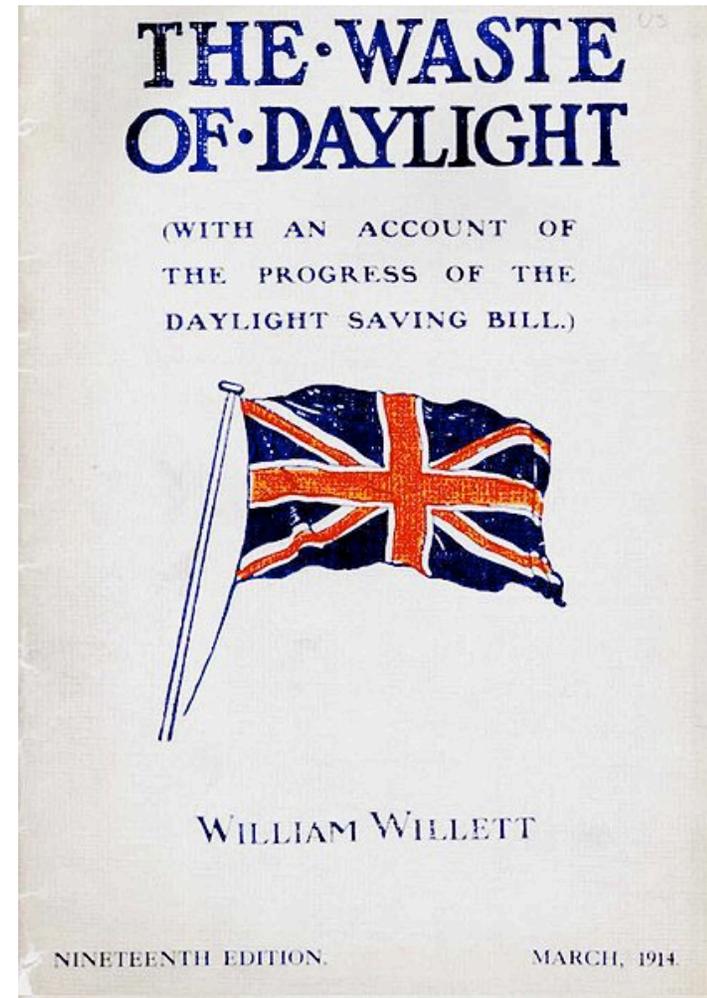

Time zones

A **time zone** is a region of the earth that has uniform standard time, usually referred to as the **local time**.

Source: Wikipedia

Daylight Savings Time

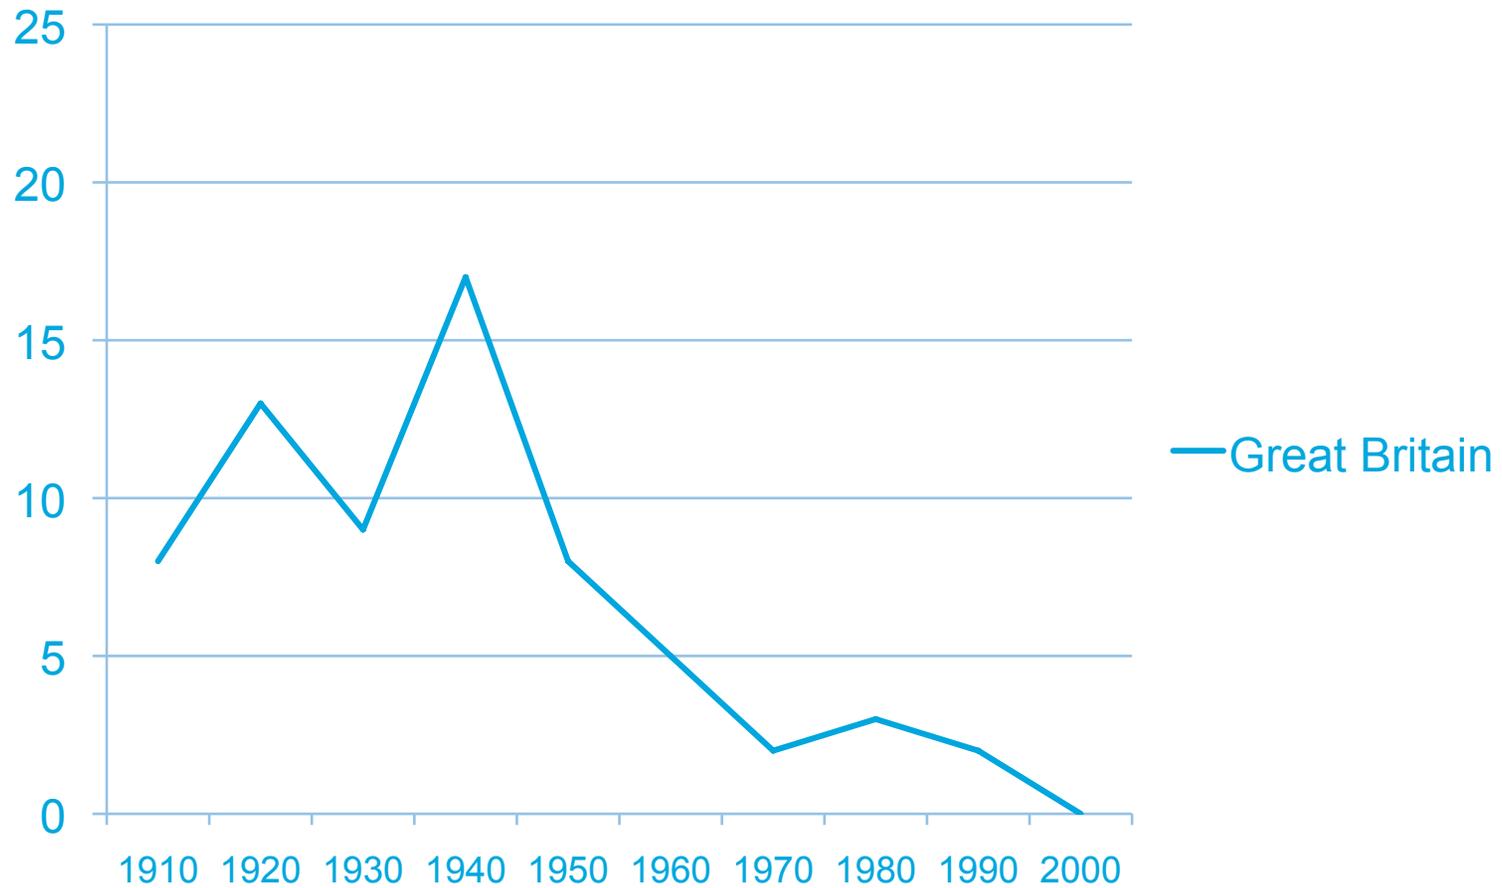

- A seasonal one hour increase in local time
- Originally proposed by G.V. Hudson of New Zealand in 1895
- Independently developed and professed by William Willett from 1904
- First implemented by Germany and her Allies on April 30, 1916

UTC != Local Time != DST...

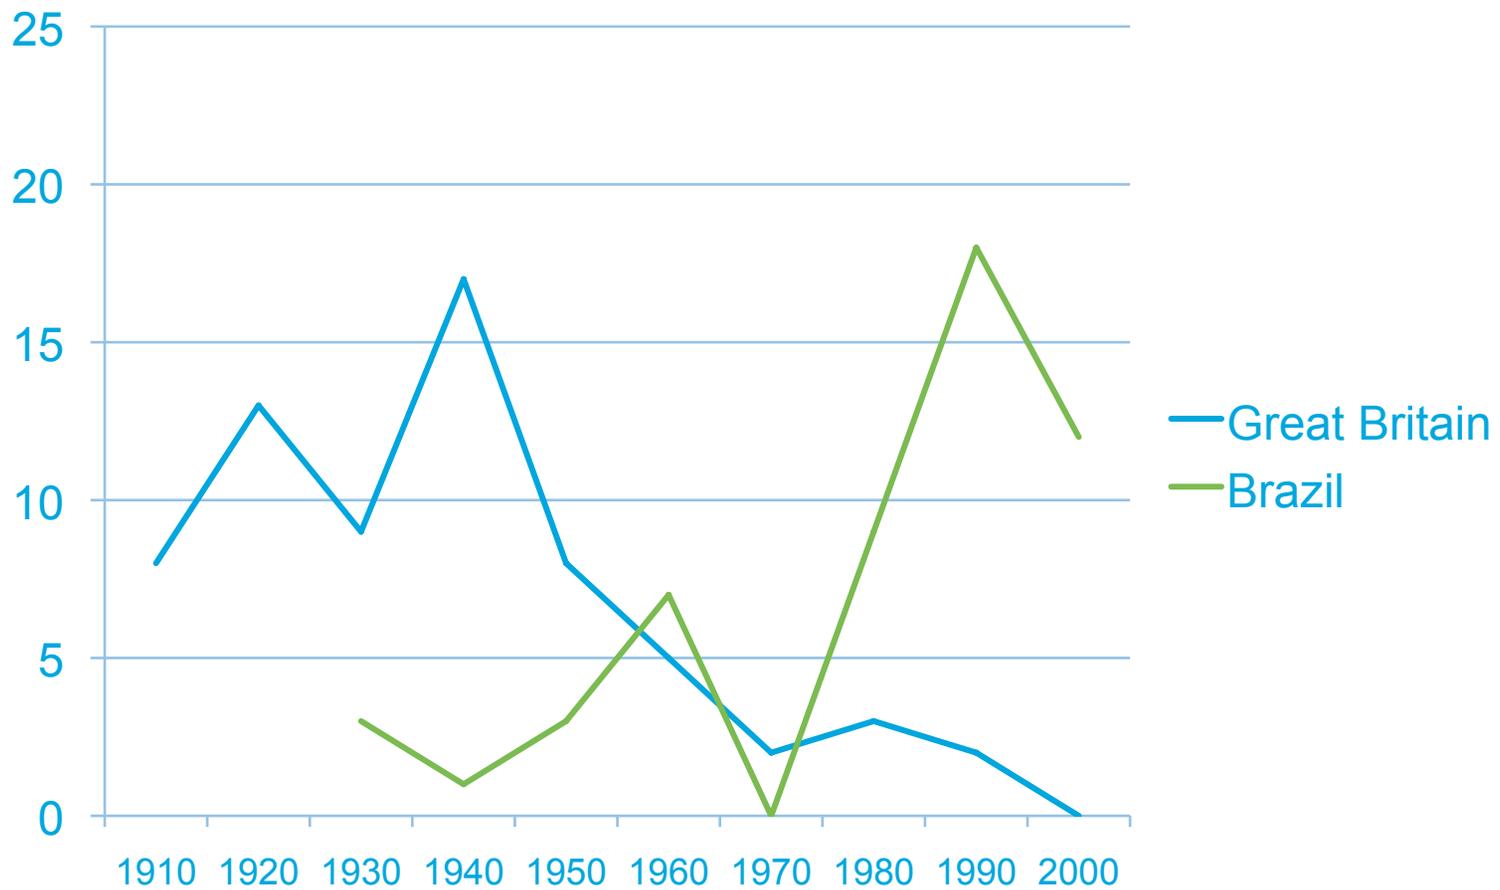

- UTC is the same across the planet
- Local time within a timezone is the same, absent DST considerations
- Each of these units are political determinations
- DST in particular tends to be volatile

How volatile is Local Time?

Continuity & Ambiguity through DST Transition

- Local time with time zones is not a continuous function.

Discontinuities or ambiguities occur when an event is scheduled in the period in question.

Why Have ANY Time Zones?

Three reasons

- People like light
- People like regularity
- And there are ca. 500 separate time zones, and we'll never get rid of them.

Within Computing

Five Common Representations

- Naked offsets
 - Commonly implemented on old cell phones and old software
- TZ Database
 - Commonly implemented in Linux and Java
- Windows TZ Database(s)
 - Commonly implemented on Windows
- IEEE 1003.1 TZ string
 - Implemented on POSIX-compliant Oses
- RFC-2445 VTIMEZONEs
 - Part of calendaring and scheduling standard

Microsoft Office Outlook 2007

Why not just use naked offsets or nothing?

- Simplest to represent. Simply specify local time and an optional offset.
- But...
- Requires a flag day to update the offset
- No notion of what time it is anywhere else

TZ Database

- Dates back to 1980s
- Based on contributions of hundreds of people
- Contains perhaps the most comprehensive and complete TZ history.
- Managed By Arthur David Olson and Paul Eggert
- Database and most of the associated code are in the public domain

Olson TZ Database Example

```

# Rule  NAME      FROM  TO      TYPE  IN      ON      AT      SAVE  LETTER/
S
Rule    Swiss    1941  1942  -      May     Mon>=1  1:00   1:00   S
Rule    Swiss    1941  1942  -      Oct     Mon>=1  2:00   0      -
# Zone  NAME      GMTOFF  RULES  FORMAT  [UNTIL]
Zone    Europe/Zurich  0:34:08 -      LMT     1848 Sep 12
        0:29:44 -      BMT     1894 Jan # Bern Mean Time
        1:00   Swiss    CE%sT  1981
        1:00   EU      CE%sT

```

The natural place to provide for time zone information is... The Network!

- RFC-4833 provides two new options for both IPv4 and IPv6
 - One for Olson
 - One for POSIX
- Example:

```
ip dhcp pool mynet
network 10.12.173.112 255.255.255.240
default-router 10.12.173.113
option 101 ascii "Europe/Zurich"
domain-name example.com
```

So Everything's Cool. Right?

- Unfortunately not.
- Arthur David Olson is due to retire in 2012.
- There is no succession plan (yet).
- There is no license structure, because the DB is public domain.
- There is no place to store the data yet.
- There is no home for the mailing list yet

Requirements

- A home for the database
- A process for managing it
- A maintainer
- **We need to preserve the current collaboration!**

draft-lear-iana-timezone-database

- Transfers responsibility of hosting the database and supporting code to the IANA
- Transfers selection of the maintainer to the IESG
- Transfers management of the mailing list to IANA
- Sets forth guidance on how decisions are made, by documenting existing practice.
- Deals with IPR associated with support code that is also distributed

What is needed now

- Review of the document by the community
- Endorsement of the approach by the community
OR feedback on how to improve the approach
- One or more volunteers who know something about time

Thank you.

Time is short...
