LISP EID Block

~~draft-meyer-lisp-eid-block-01.txt~~ (expired November 2008)
draft-meyer-lisp-eid-block-02.txt (resurrected March 2011)

Luigi Iannone

Main changes from -01:

- Ask for a generic IPv6 /16 address block

  - Previously was 0100::/8

- Updated (i.e. re-written) Section 3 "Definition of Terms"

  - Several Definitions have been added accordingly to the current set of drafts

- Updated References

  - More added since the set of drafts has increased in number

Next Steps...

- Is /16 what we want?

- Code-points?

- Document how to use the block
  - Just summarize the outcome of the discussion

- Anything else?
