Simplified Multicast Forwarding (SMF) Status

Green = Unelected, Blue = Relay
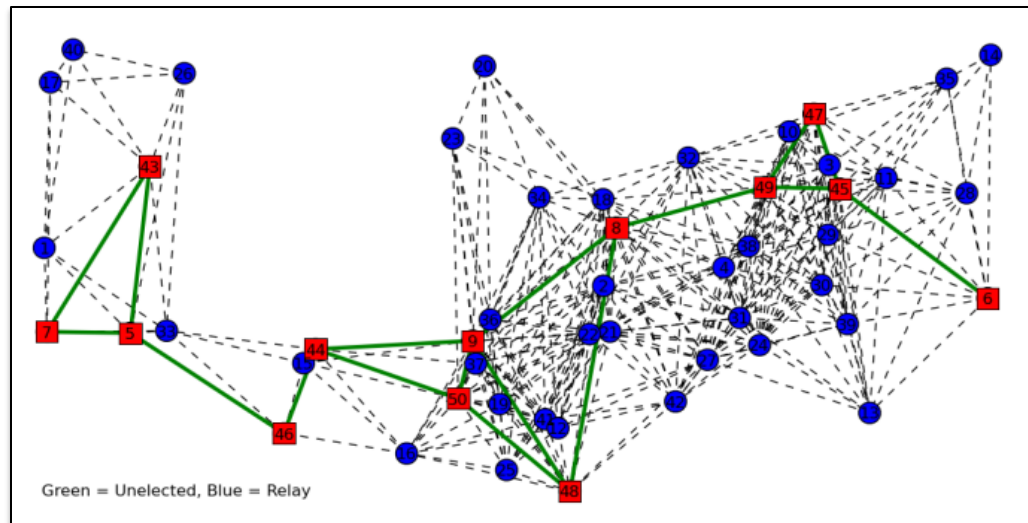

Joe Macker
IETF 80, Prague
Mar 2011

SMF ID Status

- ## version 10
  - initial WGLC completed prior to IETF 78
  - Ian completed a chair writeup
  - requested EXP pub consideration submission during that timeframe
  - received extensive comments from Ulrich Herberg
  - AD put in revision needed state

- ## version 11
  - Posted prior IETF 80
  - Various issues caused a delay in revision
  - NHDP (recently in RFC editor queue) is normative so this delay may have been sensible anyway to ensure consistency

High Level Diffs from -10 to -11

- Text thread addressing Herberg comments posted

- Definitions and consistency improved

- Some non-essential discussion text removed

- As EXP some areas remain open for experimentation and are intended to allow more experience to be gained with various operational options

Way Forward

- Since there are additional changes in definitions and discussions

    - Suggestion: Additional 2 week WGLC to provide chance to review and comment responses at WG level?
    - Believe as EXP it is ready to progress

- Review with AD status: changes, any actions
