Funkfeuer.at
& community wireless networks running MANET protocols

L. Aaron Kaplan (aaron@lo-res.org)
Presentation held at IETF80
March 2011
Clarification

• In my talk: “OLSR” = the OLSR.org implementation
Funkfeuer Vienna network
Philosophy
It [radio] is purely an apparatus for distribution, for mere sharing out. So here is a positive suggestion: change this apparatus over from distribution to communication. The radio would be the finest possible communication apparatus in public life, a vast network of pipes.

Bertolt Brecht
«The Radio as an Apparatus of Communication»
(in Blätter des Hessischen Landestheaters, Darmstadt, No. 16, July 1932)
Open Source
Open Hardware
“Free air” (ISM band)
Open Networks
Pico-Peering Agreement
Funkfeuer Vienna network
Motivation

• Why does AT&T charge me for shaking electrons?
• We are allowed to talk freely in acoustic space
• Censorship resistant networks (“3 strikes out”)
• Independence, running own network
• financially stable, self-sustaining
How it started in Vienna

2003

• q/spot history
• Book - asked if we can use 10 existing locations for free
• Jaap @ scii.nl experimenting with “mobile mesh”
• Tested AODV, mobilemesh, OLSR. OLSR sort of worked. Same results in Berlin Freifunk
• Public presentation, invitation to the public
• Support by ISPs!
Where are we now?

- aaron@viviroof:~$ ip route show table all  | wc -l
  674
- ~ 240 roofs. ~ 500 devices.
- Repeated in Graz, Bad Ischl, Weinviertel, Linz
- 10km distance to Bratislava
- Planning link to Slovenija
- Planning connection to Hamnet
- Longest links ~ 40km
- Vibrant very active community
- **our own fibre!**
Principles of Funkfeuer

• Free, everybody is allowed to join
• Pico peering agreement. Free transit
• Bandwidth provided by association
• Experimental network
• Value is (in) the network
Who?

- Students (IT, EE)
- Doctors
- Journalists
- Dentist
- Construction workers
- Unemployed
- Radio amateurs
- Nerdfactor++
Just a hobby?
Wireless networks don’t scale?
Yeah, right!
Guifi.net

guifi.net
Corba de creixement
Summary

- Guifi.net Barcelona ~ 12300 nodes - (BGP, OSPF, OLSR, BATMAN)
- Djursland - forgotten by the telco industry
- Berlin Freifunk - (OLSR + BATMAN)
- Athens wireless ~ 5000 nodes (OLSR, BGP)
- Funkfeuer.at - (OLSR, OSPF, BGP)
- czfree.cz - little info
- ninux Roma - (OLSR)
Financial Sustainability of Funkfeuer
Colocation center
Facts about the colo center

• 1 GB uplink directly to the VIX
• multihomed
• LIR. Ripe member, public IPs (v6, v4)
• slightly below market rates for server colo
Access to VIX
Colocation hosts

- local TV and radio stations
- VOIP server
- network mgmt servers
OLSR.org history

- RFC 3626, etc etc.. you know this part
- Andreas Tønnesen, UNIK Oslo (Norway) implemented it as diploma thesis for Thales
- licensed as BSD. Freifunk + Funkfeuer took the code and made it work **in practice**
- First extension: LQ (=ETX metric from MIT roofnet)
- Second extension: Fisheye (=HSLS)
- Third coding project for OLSR: “OLSR-NG”. (cleaning up the code base, make it **fast** and scalable)
Code maturity cycle

1. Something new (olsrd)
2. Make it work (olsrd)
3. Scale it (olsrd-ng)

Try something new (batman)
CPU load improvements

1. Dijkstra was shamefully inefficient!
2. Work with in place datastructures
3. Avoid malloc() thrashing
4. olsr polls, times used to be very inefficient
5. Clean up

Effect: under 1% CPU load on a 200MHz linksys in a 400 node mesh
CPU load

![Graph showing CPU load comparison before and after with legend indicating complexities.](image)
