

OAuth Security Considerations

- Draft available at
<http://datatracker.ietf.org/doc/draft-lodderstedt-oauth-securityconsiderations/>
- Based on and references
<http://datatracker.ietf.org/doc/draft-lodderstedt-oauth-security/>
- Distilled it from security document by applying the following rules
 - focus on protocol implementation by service providers and application developers
 - "what" and not the "why" - for "why" include informative reference to security document
 - Define three relevant client categories (web, native, JavaScript) and explicitly state do's and don't
