Dynamic RADIUS server discovery

Stefan Winter <stefan.winter@restena.lu>
(remotely)

Status of draft

- No new rev
 - Now that port/packet type discussion is solved, new rev in the works
- Need three labels for auth, acct, dynauth
 - Even if everything is on one port: a server can take on only a subset of roles
 - It must be discoverable which roles the server has
 - And must be possible to send to different servers
- Could look like S-NAPTRs:
 - radius.tls, radacct.tls, raddynauth.tls
