

WEIRDS

WEIRDoS: Francisco Arias, Benedetto
Fiorelli, Murray Kucherawy, Andy
Newton, Dave Piscitello, Steve Sheng,
[Andrew Sullivan](#)

WEIRDS: what

WHOIS-based Extensible Internet Registration
(Resource?) Data Service

WEIRDS: what

RESTful Whois data service

WEIRDS: what?

- draft-kucherawy-weirds-requirements
- draft-fiorelli-weirds-rws
- draft-newton-weirds-arin-whoisrws
- draft-sheng-weirds-icann-rws-dnrd

These are based on existing implementations.

WEIRDS: why?

- Whois has no data format at all
- Whois has never been internationalized
- Users want a structured data format & internationalization

WEIRDS: why? (uh, IRIS)

Well, yes, but it hasn't been deployed much.

Deployers complain it's "too complicated."

WEIRDS: why?

REST is easy & widely used ...

WEIRDS: why?

REST is easy & widely used, which makes it a good format for a query service.

WEIRDS: where and when?
