

draft-ietf-behave-lsn-requirements

Editor: Simon Perreault
simon.perreault@viagenie.ca

IETF 81
2011-07-27

Status

- -01 to -02
 - 6 requirements to 13 requirements
 - Adjusted rationales
 - Tweaked existing requirements
 - Adjusted bulk port allocation section
 - Added section on deployment considerations
- Sections on logging and bulk port allocation are informative
 - No requirements

Open Issues

- Do we need to re-state I-D.ietf-intarea-ipv4-id-update section 9?
- Mandate PCP server? (Right now we require any “port forwarding protocol”.)
- Is the WG OK with **non-normative** logging and bulk port allocation sections?
- Relax requirement for hold down pool for these:
 - TCP mappings with session tracking
 - Mappings with endpoint-dependent filtering
