Agenda

- Changes to System Notifications draft
- Issues from Mailing List
- Next Steps

Changes from -03 to -04

- Renamed module to NETCONF Base Notifications. The module is now ietf-netconf-base-notifications. The namespace and prefix are now changed as well.
- Changed notifications so a server can report non-NETCONF initiated events.
- Replaced security considerations, according to template in RFC 6087.
- Added Acknowledgements section.

Mailing List Issues (1)

- Update references
- Remove redundant enum values
- How does capability change occur?
- Session ID = 0 (for multiple non-NECONF sessions)
- Are server vs. user initiated changes clear?
- How to interpret session-start and session-end for a non-NETCONF session?

Mailing List Issues (2)

- Update terminology to be more consistent with existing NETCONF RFCs
- Simplify document structure by removing extra sub-heading
- Simplify module name
- Typos and clarifications

Next Steps

- Resolve non-NETCONF session functionality issues
- Update document within 2 weeks
- Issue final WGLC
