

RESTENA

IETF 81 – radext meeting 25 jul 2011

RADIUS/TLS

Stefan Winter <stefan.winter@restena.lu>

Status of draft

- New rev -09
 - “Client identification” - issue resolved as discussed in last meeting
 - Added appendix C: Crypto-Agility assessment
 - After checking back with TLS wg: the cipher suite that was discussed on-list is seen as being a 3-key triple DES
 - Slight text change regarding packet types to make clear that the text only lists **examples** – but the concept is packet-type agnostic

Future

- Draft should be clean for the WG review treadmill :-)
