# draft-ietf-armd-problem-statement

- -00 is first WG version of draft-narten-armd-problem-statement-00
- Changes from previous version:
  - Slightly expanded scope of document
- Additions since previous version:
  - Added two simple “representative” data center designs
    - but overlaps with draft-armd-datacenter-reference-arch
  - More details on ARP and ARP issues (e.g., non-standard implementation enhancements, routers with many interfaces)
- Open issues:
  - Have not covered Neighbor Discovery in detail

# Next Steps

- Haven't gotten much specific feedback
  - Need some “I think this is good and complete” reviews, or
  - “here are some things that need to be added”
- Next steps depend on feedback...
