

Energy Management (EMAN) Applicability Statement

draft-tychon-eman-applicability-statement-05

Emmanuel Tychon
Brad Schoening
Mouli Chandramouli
Bruce Nordman

82th IETF Meeting, Taipei 2011

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- Draft based on Working Charter

“6. The EMAN WG will develop an applicability statement,”

- Scope of Applicability Statement draft

- List of use cases that EMAN should solve

- What are the requirements needed to address those use cases ?

- MIB modules and Framework are derived from the requirements.

- Standards that influence EMAN

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- Topics of discussion
 - What is new in version 05 ?
 - Additional use cases
 - Reorganized standards that influence EMAN
 - Consistent with terminology draft
 - Merged content with draft-nordman-eman-energy-perspective-01

 - Open issues – feedback from the WG

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- For every use case
 - Description of the network scenario
 - What are target devices ?
 - How powered ?
 - Reporting mechanism

EMAN Applicability Statement

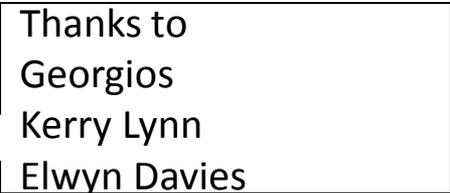

draft-tychon-eman-applicability-statement-05

- Use case Scenarios & Target devices
 - Network devices - Routers, switches and their components
 - Devices attached to a network - PoE powered devices
 - Smart Meters and PDUs
 - Proxys – mid-level managers
 - Gateways to building networks
 - Home energy gateways
 - Data center devices
 - Multiple power sources
 - Energy Storage devices (battery, UPS)

- Industrial Automation scenario (ODVA)
- Demand Response
- Off-Grid devices
- Power Capping

New use cases

Thanks to
Georgios
Kerry Lynn
Elwyn Davies

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- Use case patterns
 - Metering
 - Metering and control
 - Power supply, metering and control
 - Multiple power sources

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- EMAN <-> other Energy standards
 - 4.1. Data Model and reporting
 - IEC
 - DMTF
 - ODVA
 - ASHRAE SPC 201P
 - Ecma
 - IEEE ITSO PWG
 - 4.2. Measurement
 - ANSI-C12
 - IEC-62301
 - 4.3. Informational
 - Energy star
 - Smart Grid

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- Open Issue – 1
- We have a list of use cases – network scenarios EMAN should solve
 - some overlap between use cases
 - should we drop some of the use cases if there is overlap
- Do we need a list of unique use cases ?
 - Use case patterns – has an abstraction of the use cases
- Any use case not in scope of EMAN ?
- Seeking feedback from WG

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- Open Issue -2
 - IEC Standards
 - IEC 61850 -7-4 - data model for power quality/characteristics
 - IEC 61000-4-30 – is useful for power quality benchmarking
 - IEC 62053-21 - Energy meters, smart PDUs

 - Question to the WG – any other standard to be considered ?

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- Open Issue -3
 - EMAN should consider
 - ASHRAE SPC-201P
 - Use cases
 - Information model
 - Should be released for public review
 - ODVA
 - Information model
 - Should be released for public review

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- Next Steps
 - Trace if there are requirements for each use case
 - Use cases for requirements
 - We have requirements for Power quality/characteristics
 - Need use case for power quality
 - Any other use cases that should be considered by EMAN ?
 - Requirements are baselined

EMAN Applicability Statement

draft-tychon-eman-applicability-statement-05

- Summary
 - Updated draft with additional use cases and the standards section
 - Discussed the feedback from the mailing list
 - Request the document to be a WG item
