gss naming extensions

to WGLC and beyond

2 remaining issues

- Improve the persistent NameID example!

  - Scott has provided text on the list

- What are unknown attributes and how should we deal with them?

  - Option 1: Return an error

  - Option 2: Client must verify if it cares

  - **Option 3:** both – return error if you don't have konowlege of an attribute and verify if the attribute is critical to you
