

# FC (Fibre Channel) pseudowire status

David L. Black (EMC)

- draft-ietf-pwe3-fc-encap-16
  - Current state: Authors 48 hours (at RFC Editor)
  - Missing Reference: FC-BB-6 (T11 FC standard)
    - FC pseudowire: Incorrect in earlier FC-BB-\* documents
- Goal: 48 Hours should not consume 48+ Weeks
  - T11 is amending FC-BB-5 to include necessary changes
    - Link Encoding: 8b/10b FC links only (not 64b/66b links)
    - Flow Control: ASFC for FC pseudowire
- FC PW RFC will reference amended FC-BB-5
  - Expect RFC to appear before Spring IETF meetings (Paris)
