Some ABFAB I-D updates:
Use Cases
OID Registry
UI / Usability

Rhys Smith

draft-ietf-abfab-usecases

- Recent changes

  - Added telecoms operator cross-layer use case (draft-wei-abfab-fcla)

  - Some textual tidying up

- Any more use cases?

  - (PLASMA will be added shortly, some info/text provided)

  - Still have placeholder for SIP?

  - Any more from anyone? All input welcome!

draft-smith-abfab-oidregsitry

- 2 OIDs issued:

  - ...abfab.mechanisms.gss-eap-v1

  - ...abfab.nametypes.GSS_EAP_NT_EAP_NAME

- I-D status

  - Currently not a WG document, it should probably be adopted?

draft-smith-abfab-usability-ui-considerations

- No updates recently (sheer lack of time), will be working on it between now and IETF 84.

- So any comments on -00 would be good, so I can address them in -01

- Any input welcome!

- Also – should this also be adopted?
