DECADE Problem Statement

draft-ietf-decade-problem-statement-05

Haibin Song
Haibin.song@huawei.com
Status

• Passed IESG ballot (-05)
  – Received a lot of comments from other areas and IESG members
  – Removed a lot of text that is not supposed to be in a problem statement
  – Thanks to David Harrington for the comments
  – Thanks to Rich Woundy for the document shepherd help
Moving Forward

• Now that the draft is IESG approved, further draft edits from IESG review comments will be captured in RFC Editor Note
• Gen-Art review captured in RFC Editor Note already
• Remainder of IESG review comments follow...
IESG Comments - 01

- Add reference to RFC 4949 where the document just wants to cite the terminology for some security threats
  - Today the draft refers to RFC 3414; is that sufficient?
IESG Comments - 02

- Remove examples which may look like marketing advertisements from the first paragraph of section 3. (PPLive and Octoshape)
  - This needs to be evaluated by the authors
IESG Comments - 03

• Add security risks description, and more text on the security threats in DECADE context
  – These need to be evaluated by the authors
IESG Comments - 04

- Make problem description more explicit
- Clarify what is "inside network"
- Added a reference to "P2P caching”
  - These need to be evaluated by the authors
Next Steps

• Authors / document shepherd propose writeup as response to IESG comments
• AD writeup submission triggers the IESG approval announcement
• Authors communicate with RFC editor until it is published...
