

# Public Safety Answering Point (PSAP) Callbacks

Hannes Tschofenig, Henning  
Schulzrinne, Christer Holmberg,  
Milan Patel

# Status

- Problem statement with callback scenarios in
  - <http://tools.ietf.org/html/draft-ietf-ecrit-psap-callback-04>
- Discussion showed that most folks have not read the current working group draft ;-(
- Conflicting requirements surfaced:
  - Want to allow callbacks that relate to previous emergency calls (within a given timeframe) – using some form of nonce, tokens, etc.
  - Callback takes different route than the original call

# What should we do?

This is why I'm trying to suggest that searching for a single magic solution that is

- secure
- works everywhere
- works with broken implementations
- works with no changes anywhere

is a fool's errand. Rather, by combining solutions, we might allow different providers/enterprise/UAs to pick their own trade-off and migrate to better solutions over time.

Henning
