PSAP Callback Identifier

IETF#83, Paris, France

Christer.Holmberg@ericsson.com

NUTSHELL

› Identifier, present in the INVITE request of a PSAP callback

   – Allows network entities to identify, and give special treatment to, PSAP callback calls.

   – Allows the UA, that made the associated emergency call, to identify the PSAP callback call.

› PSAP callback can traverse different entities/ networks than the associated emergency call

STATIC vs DYNAMIC VALUE

DYNAMIC VALUE

- DYNAMIC VALUE
  - Generated by registrar
  - Provided to UA during registration
    - For how long is it valid?
  - PSAP callback can come after re-registration
    - What happens if the PSAP callback call comes after the value has "expired"?

›

USER SPECIFIC VALUE

- USER SPECIFIC VALUE
  - Static (only valid until … based on AOR)
  - Generated by registrar
  - User specific value (e.g. based on AOR)

THANK YOU FOR LISTENING!
